## Film Faced Plywood

Our Piano Singer Leonking plywood produce all kinds of plywood and blockboard for clients from all over of world based on different standard and system. Format sizes are 1220x2440 /1250x2500 /610x2500 /1500x3000 /1525x1525 mm, thickness from 9mm to 30mm, or customized.

**FILM FACED PLYWOOD**: includes normal film faced plywood, one side anti slip film faced plywood, circular film faced plywood and plastic overlay film faced plywood. Meanwhile, we can produce melamine/phenolic glue overlay plywood too. Main purposes are for concrete formwork, decking, box, and store/warehouse shelves.

An example of the variety of suitable uses for our special coated plywood include:
Cement-Formwork Template System
Smooth-shuttering,moulds,furniture
Mesh-Vehicle bodies,walkways,staging
Hexa-vehicle bodies,flight cases,packaging
Diamond-Flight cases,packaging

# Instructions for Use and Maintenance of Formwork Panels

USAGE

The formwork panels are mostly used in construction for concrete shuttering. Before usage, the user/contractor should check whether the panel surface quality is sufficient for the desired concrete surface quality. As the formwork panels are made of solid wood, wood texture can be visible on the concrete surface. Therefore, the formwork panel producer does not undertake any responsibility for the quality of the concrete surface. After use, traces of the edge protective varnish on the concrete surface may also be visible.
The panels are supported at intervals as specified in the diagram of intervals in the producer's brochure.

When assembling or disassembling formwork panels, utmost attention should be paid to minimising the damage to the panels through the use of saws, nails or other fasteners. You should also be careful not to damage the surface of the boards with a hammer or sharp objects. Such damages inevitably affect the quality of the concrete surface.

Before applying concrete, the panels should always be treated with formwork oil and thoroughly moistened/sprinkled with water in order to minimise the risk of the concrete sticking to the panels. You should be very careful when removing the shuttering especially if the panels are nailed, screwed or fastened in any other way. It is essential to prevent the falling of the panels from greater heights and any resulting damage which might occur.

MAINTENANCE

After use, the panels should be cleaned of all residues and placed on a flat surface. For the protection of the shuttering, a paraffin paste or formwork oils should be used in accordance with the producer's instructions. The panels should be kept in a covered and shady place. If stored outdoors, the panels should be covered with a sheet shall (a tarpaulin plane) protecting them against harmful weather conditions (sun, rain). If the panels are exposed to the sun, splits and/or cracks may appear on the outer layer. Such panels must be properly moistened with water before next use! Apart from that, fading (discolouration) may appear on the surface protection, which, however, does not significantly affect the functionality of the panel. Due to the components and the colours of wood, the panels may stain brownish when exposed to rain.

WARNING

In extreme weather conditions (significant deviations from normal humidity and temperature, or longer periods of dry and hot weather) you should take extra care of the shuttering, mostly making sure that the panels are not exposed to the heat of the sun for longer periods. Should you fail to do so, longitudinal cracks on the outer layer may appear, which significantly affect the lifetime of formwork panels and the quality of the concrete surface. Such panels should be properly moistened with water before use, otherwise they might be permanently damaged due to the intrusion of the concrete emulsion into the cracks!
Moreover, wooden formwork panels contain certain wood components, such as tannic acid or resins, which might cause stains on the concrete surface.

# Anti-Slip Film Faced Plywood

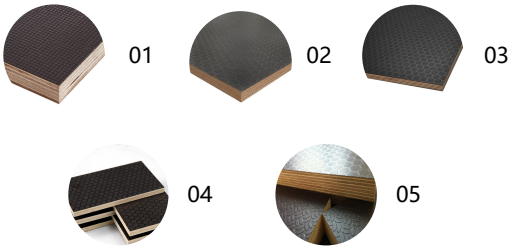

At the heart of our special coated plywood is a core of strong,stable cross banded,exterior birch,eucalyptus,poplar core plywood.Coated with a tough durable phenolic overlay and in most cases acrylic edge sealing,the products are suitable for use in the most demanding of application.

The phenolic coating on our special coated plywood comes in a range of colours and is hot pressed to give both smooth and patterned faces.These can then be used in a wide and varied range of applications where durability,toughness,slip-resistance and resistance to chemicals and other liquids are of the up most importance

An example of the variety of suitable uses for our special coated plywood include:

Smooth-shuttering,moulds,furniture
Mesh-Vehicle bodies,walkways,staging
Hexa-vehicle bodies,flight cases,packaging
Diamond-Flight cases,packaging

## LEONKING 3 Ply Yellow Shuttering Panel

LEONKING®

CE FSC www.fsc.org FSC® C121029 ISO 9001:2015 COMPANY CERTIFIED CARB ATCM 93120 Water Boiled Proof CASTING 30 TIMES OUTSTANDING DURABILITY E0 GUARANTEE

LEONKING 3 Ply Yellow Shuttering Panel

Applications:

Concrete formwork systems
Wall formwork
Ceiling formwork
Formwork for civil engineered structures
(Bridge construction,foundations)
Tunnel formwork

Benefits:

Dimensionally stable due to plywood-type construction
Almost crack-free
High bending strength and stiffness
Sanded surfaces for perfect results
Low cost due to high number of uses
Long service life

## LEONKING 3 Ply Yellow Shuttering Panel

## Technica data Leonking®

| | | | |
|---|---|---|---|
| Product | 3-ply yellow concrete formwork shuttering panel coated with melamine resin that allows a resistant and smooth surface | | *Leonking panel 21 mm*<br>*Leonking panel 27mm* |
| Wood species | Spruce/Fir/Mongalian pine | | |
| Wood moisture | 12% ± 2% | | |
| Weight | 12 kg/m2 (27 mm) / 10kg/m2 (21 mm) | | |
| Formats (mm) | 1000x500 - 1500x500 - 2000x500 - 2500x500 - 3000x500 | | |
| Thickness (mm) | 21, 27 | | |
| Surface protection | Highly resistant melanine coating, extremely smooth surface | | |
| Edge seal | Water repellent edge formork finish, yellow | | |
| Packaging | 21mm/114 pcs package, 27mm/88pcs package. The packages are ready to be immediately used at the worksite. The package is placed on supporting wood, protecting the panels and provide simple use to with forklift. | | |
| Design values | Mechanical properties | 21 mm | 27 mm |
| | Minimal value | 40N/mm2 | 40N/mm2 |
| | Modulus of elasticity (mean value) | 10000N/mm2 | 10000N/mm2 |
| Note | The values are calculated with a wood moisture of 12%. With heavy moisture penetration up to fiber saturation point, the values for bending strenght and flexural modulus of elasticity may be up to 30% lower | | |

## LVL-Laminated Veneer Lumber

## LVL Certification

The LVL we stock are made to high quality standards and comply to AS/NZS 4357.0 – Structural Laminated Veneer Lumber.This compliance has been certified by BSI, an Australian accreditation body approved by JAS-ANZ,the same accreditation body other major LVL manufacturers use to accredit their LVL's.

Our product uses the same/equivalent timber species,glus and manufacturing process as other local major LVL manufacturers uses and is an equivalent product.

## Compliance Certifications

·FSC Chain of Custody Certification
·CARB P2 EPA Certification
·EWPAA LVL Product Certification
·JIS-Japanses Indusrial Standard Certification
·ISO 9001 Certification
·ISO 14001 Certification
·ISO 45001 Certification
·ECNZ-Furniture,Fittings,Flooring Certification

# CDX PLYWOOD

## Application:

CDX Plywood is the most used product in the construction industry for the foundation of building and roofing due to its sturdy nature.
It is dense and heavy due to pressing a large number of plies together, making it a preferred and cost-effective solution.
Pianoplywood is a leading producer of CDX Plywood in China focus on a high-quality product and service.

## CDX is a specific type of plywood and not a thickness indicator.

•**1/4-inch** – thinner plywood will break. For CDX plywood, you shouldn't use anything less than 1/4-inch, which works for indoor projects and cabinetry.
•**3/8-inch** – only slightly more significant than the minimum safety allowance. If you want something that won't break without adding too much, this will work.
•**1/2-inch** – very common. 1/2-inch plywood is the most common size, and if you're unsure which size you need, then 1/2-inch will work for any project.
•**5/8-inch** – also typical for most projects. While not as popular as the next larger or smaller size, it does work well. If it's available, then go for it. You won't regret the decision.
•**3/4-inch** – ideal for thickness, but isn't too wide for most projects. The plywood isn't recommended for interior projects due to its weight. For exterior projects, this works well.
•**1-inch and more** –if it's thicker than 1-inch, you should know beforehand what your project will entail. Projects requiring greater durability would use plywood thicker than 1-inch. Projects requiring greater durability will use plywood thicker than 1-inch.

## CDX stands for:

•**C –** veneer grade for one strip of plywood.
•D – veneer grade for one strip of plywood.
•**X** –glue used to connect both veneers. This makes the plywood durable and rugged. It has nothing to do with "exterior."

## *Frequently Asked Questions (FAQ)*

### *Is OSB The Same As CDX Plywood?*

*OSB is not the same as CDX plywood. While they can both be used for similar projects, they aren't entirely interchangeable.*

### *What Happens if CDX Plywood Gets Wet?*

*CDX plywood is made for outdoor use. It can absorb water without harming the wood and will dry out quickly. But it should always have a moisture barrier in place and be covered with some type of covering, like roofing.*

### *Is CDX Plywood The Best Plywood?*

*CDX is considered the best in many cases. However, there isn't a number one plywood overall. There is simply the best plywood for each job. The prettiest is A grade, while the strongest is D grade.*

### *Is CDX Plywood Treated?*

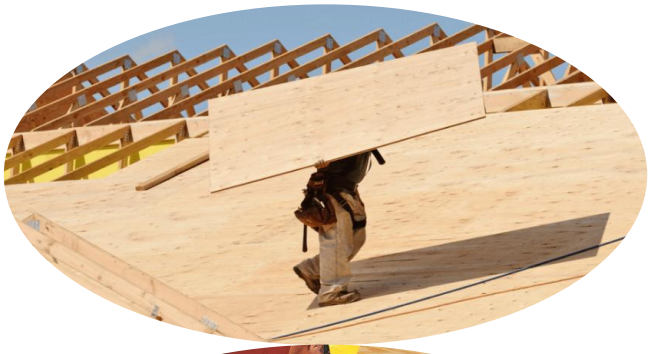

*CDX plywood is not necessarily treated. You will need to look for the term "pressure-treated" on the plywood itself if you want to know. The plywood grade is not related to whether it is treated.*

### *Is CDX Plywood Fire-Rated?*

*CDX plywood is better to use around fires than other plywood. But the treatment is really what affects the fire-rating. Treated wood is more fire-resistant than untreated wood, so check for this detail.*

### *What Is The Difference Between CDX And ACX Plywood?*

*The difference is that ACX plywood will have a pretty and delicate side, while CDX will look much rougher. One side of the ACX plywood will be sanded and smooth.*

## H Beam

## Technical features

### Below are the features of wooden H20 beams

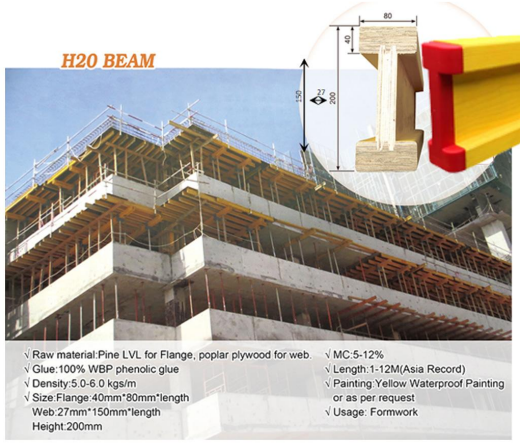

- **Type of wood:** Fir/Pine
- **Weight:** 5-6 kgs/m
- **Gluing:** Phenolic glue, type EN 30, approved for fixing wooden structural components
- **External:** made of selected solid pine or fir and coupled with 80 x 40 mm section - milled and perfectly calibrated for an optimal assembly with core
- **Core:** Timber/LVL/Plywood
- **Surface:** treatment with water repellent paint
- **Standard length:** 1.2M-7.2M
- **Quantity:**About 5000M/40HQ
- **Standard packaging:**105 pcs per package

Thanks to their perfect assembly, H20 and H20+ beams can be cut and used at any length.

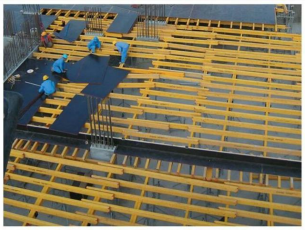

**Our Advantage:**

1)The overall quality is durable and conforms to EN13377 standard

2)All webs are whole LVL,no splicin in the middle.

**Related products H16 H24 and other customized size**

| Name | H16 | H20 | H24 |
|---|---|---|---|
| Size(mm) | 160*65*35*125*27 | 200*80*40*150*27 | 240*80*40*190*27 |
| E I(kNm²) | 200 | 450 | 700 |

Assembly diagram for positioning beams and props: distance between the props (C), distance between the main beams (B), distance between the secondary beams (A).

**An example of calculation:**

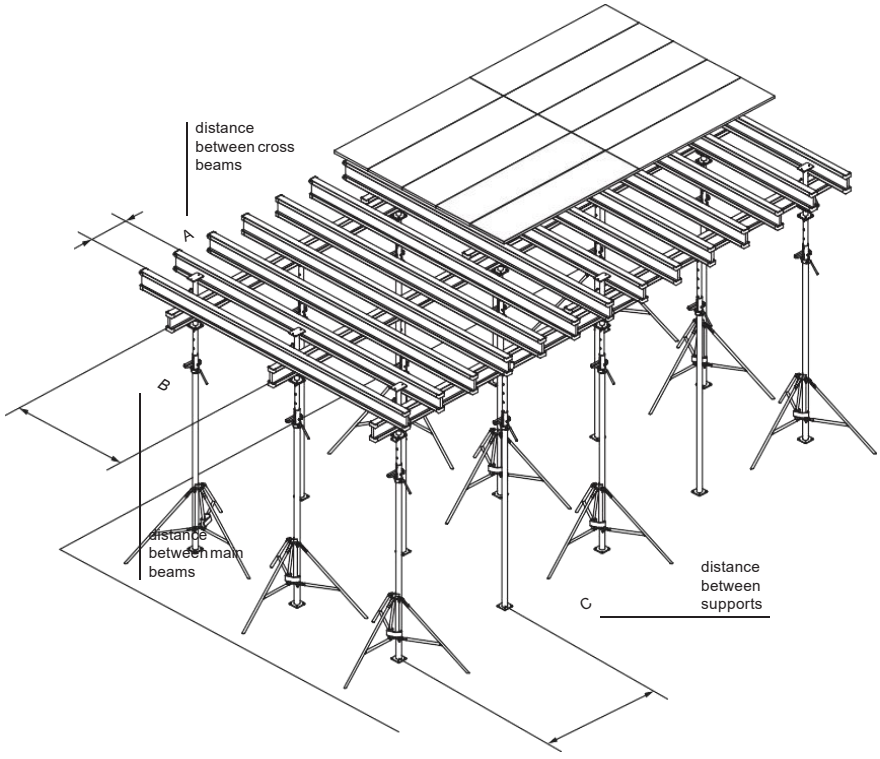

Floor thickness: 20 cm, distance between crossbeams: 0.75 m; we are looking for the distance between the main beams and the supports.

The permissible distance between the main beams according to the table 1 = 2.60 m.

The identical or the closest distance between the main beams in the table 2 = 2.5 m.

Look for the permissible distance between supports in the table 2, read vertically down the column “2.50 m” and horizontally in the row “20 cm” of the column “floor thickness”, the result is 1.28 m.

**Caution:** Examine the supports to ensure the corresponding carrying force.

# Timber

## Uses of Timber

It is generally used in the form of posts, beams, lintels, doors, window frames, roof members, piles, etc.
It is used for flooring, ceiling, paneling, etc.
It is used for the formwork, timbering for trenches, scaffolding, transmission poles, and fencing.
It is used in making furniture and musical instruments.

**Generally, timber has two categories namely Hardwood and Softwood. But many types of timbers are included in this category,**

- Douglas fir
- Spruce
- Fir
- Malacca
- Radiata pine
- Larch
- Mongolian pine
- Birch
- Ash
- Basswood
- Walnut
- Cherry
- Oak
- Paulownia
- Rubberwood
- Southern yellow pine

# Lumber Grades

## Standard Lumber Grades

### Lumber Surface Measurements

| Cutting No. 1 | Cutting No. 2 | Cutting No. 3 | Cutting No. 4 |
|---|---|---|---|
| 3 1/2 in. x 4 1/2 ft. = 15 3/4 units | 8 1/2 in. x 4 1/2 ft. = 38 1/4 units | 4 1/2 in. x 4 1/2 ft. = 20 1/4 units | 6 in. x 5 2/3 ft. = 34 units |
| 89 mm. x 1372 mm. = 15 3/4 units | 216 mm. x 1372 mm. = 38 1/4 units | 114 mm. x 1372 mm. = 20 1/4 units | 152 mm. x 1727 mm. = 34 units |

(A) Surface Measure (S.M.) using lumber scale stick or from formula:

$$\frac{\text{Width in inches x length in feet}}{12} = \frac{12 \text{ in x } 12 \text{ ft}}{12}$$

= 12 ft² S.M. or 3658 mm²

(B) No. 1 Common is assumed grade of board. Percent of clear-cutting area required for No. Common is 66 2/3 % or 8/12.

(C) Determine maximum number of cuttings permitted.

For No.1 Common grade (S. M. + 1) ÷ 3

$$= \frac{12 \text{ in x } 12 \text{ ft}}{12} = \frac{13}{3} = 4 \text{ cuttings}$$

(D) Determine minimum size of cuttings.

For No.1 Common grade 4 in x 2 ft or 3 in x 3 ft = 102 mm x 610 mm or 76 mm x 914 mm

(E) Determine clear-face cutting units needed.

For No.1 Common grade
S. M. x 8 = 12 x 8 = 96 units

(F) Determine the total area of permtted clear-face cutting in units.

Width in inches and fractions of inches x length in feet and fractions of feet.

Cutting No.1 3 1/2 in x 4 1/2 ft = 15 3/4 units
Cutting No.2 8 1/2 in x 4 1/2 ft = 38 units
Cutting No.3 4 1/2 in x 4 1/2 ft = 20 1/4 units
Cutting No.1 6 in x 5 2/3 ft = 34 units

Total Units = 108 units

Units required for No. 1 Common is 96

Conclusion: Board meets requirements for No. 1 Common grade.

## Standard Lumber Gardes

### Manufactured Lumber Grade

| Clear | Select | No. 1 Common | No. 2 Common |
|---|---|---|---|
| mostly heartwood and accepts a 3/8" (10 mm) strip of bright sapwood or an equivalent amount of not more than 1" (25 mm) wide along the edge and a minimum number of character marks and discoloration, allowing for all natural heartwood color variations | allows all color variations of natural heartwod and sapwood along with characters such as small knots, pinworm holes, and brown streaks | contains prominent variations in coloration, which include heavy streaks, sticker stains, open checks, knots and small knot holes that fill | contains sound natural variation of the forest product and manufacturing imperfections to provide a serviceable floor |

### Average Lengths for Unfinished Grades

| Grade | Standard Packaging | | | | Shorter Packaging | | | |
|---|---|---|---|---|---|---|---|---|
| Clear | 3 3/4 ft | 45 in | 1.14 m | 1140 mm | 3 1/2 ft | 42 in | 1.07 m | 1070 mm |
| Select | 3 1/4 ft | 39 in | 0.99 m | 990 mm | 3 ft | 36 in | 0.91 m | 910 mm |
| No. 1 Common | 2 3/4 ft | 33 in | 0.84 m | 840 mm | 2 1/2 ft | 30 in | 0.76 m | 760 mm |
| No. 2 Common | 2 1/4 ft | 27 in | 0.69 m | 690 mm | 2 ft | 24 in | 0.61 m | 610 mm |

## Circular Film Faced Plywood

**Circular column formwork**
**Accessories**
Clamp, bolts, nuts, base-collar(optional)

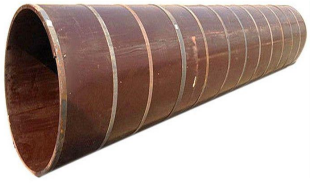

**Features**
--Tougue and groove to prevent leakage.
--Made of phenolic film faced plywood, light in weight, easy handling
--Nice smooth concrete finish without rework
--Quick installation and dismantling.--Can stack to be any height.

**Advantages**
--Very efficient with 6-8 pours per column formwork.
--Highly-waterproof
--No leakage
--High flexbility
--High class of concrete finish.
--Easy to cut for beams or customizing if required.

| | |
|---|---|
| Length | 1000-3000mm(customizable according to requirements) |
| Diameter | 300-3000mm(Customizable according to reuirements) |
| Thickness | Diameter:300-1200mm,Thickness:14-18mm;Diameter:1200-3000,Thickness:20-22mm |
| Certificate | FSC/CE/CARB/ISO 9001 |
| standard | EN314-2/EN 636 |
| Material | Poplar.Eucalyptus,Pine,Birch or other hardwood |
| Application | Construction/concrete formwork,template,mold,shuttering & etc |
| Face/Back | Surface coated company logo film paper,can be customized. |

## Platsic Film Faced Plywood

CASTING 30 TIMES

OUTSTANDING DURABILITY

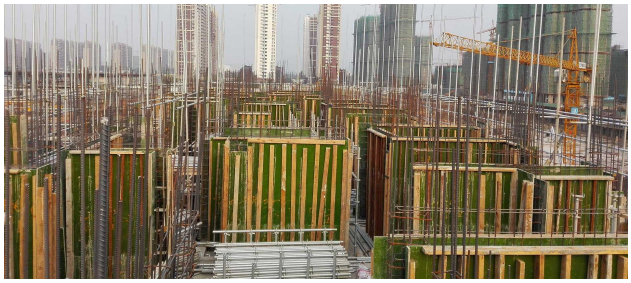

### Product Detail:

This product mainly used in high-rise commercial buildings, pouring roofs, beams, walls, columns, stairs and foundations, bridges and tunnels, water conservancy and hydro-power projects, mines, dams and underground projects.

Plastic coated plywood has become the new favorite of the construction industry for its environmental protection and energy saving, recycling economy and economical benefits, and waterproofing and corrosion resistance.

### Production Flow(As Follow):

1.Raw Material → 2.Logs Cutting → 3.Dried
4.Glue on each veneer → 5.Plate Arrangement → 6.Cold Pressing
7.Waterproof Glue/Laminating →8.Hot Pressing →
9.Conditioner & Calibration →10.Plastic Film Overlay
11.Hot pressing →12.Cutting Edge →13.Spray Edge Paint →14.Packing

## OSB – Oriented Strand Board

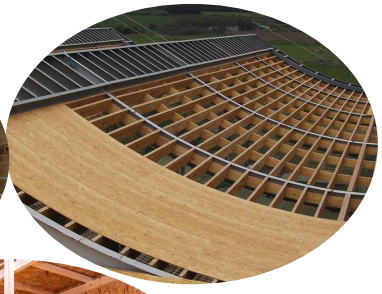

**OSB sheathing panels provide dimensional stability and stiffness for wall and roof sheathing applications. These panels have strong and uniform consistency throughout. Plus, they have a blue edge seal that helps prevent moisture-related issues such as edge swell.**

- Every piece meets the highest grading standards for strength and appearance
- No core voids, knots, or splits
- Multi-layered bonding provides exceptional dimensional stability and stiffness
- Panels offer strength, racking and impact resistance, and uniformity

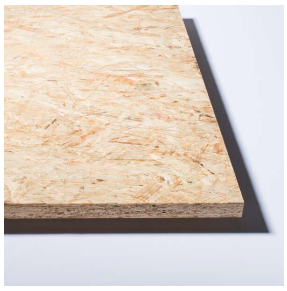

| | |
|---|---|
| Format | 2500*1250 , 2440*1220mm ,(customizable according to requirements) |
| Thickness | 9,12,15,18mm ,(Customizable according to reuirements) |
| Emission Class | E1 (EN ISO 12460-5) |
| certificate | FSC/CE/CARB/ISO 9001 |
| standard | EN 300-type OSB 3/EN 13501-1:class B-s1,d0/EN 13986:2004+A1:2015 |
| Application | 1.Structural applications:walls,floors,roofs,staircases,hoardings , 2.Interior:furniture elements,decorative elements in indoor spaces,framework in upholstered furniture,door panels,claddings and partition walls , 3.Packaging:shipping boxes and containers,pallets , 4.Retail & exhibitions , 5.Warehouse management(shelving,racking,etc.) |

# OSB - Oriented Strand Board

***OSB 2***

OSB 2 is developed and manufactured entirely in compliance with the current demand of ecological living focused on organic materials. Selecting suitable wood and binder, OSB 2 meets high standards of not only environmental buildings.

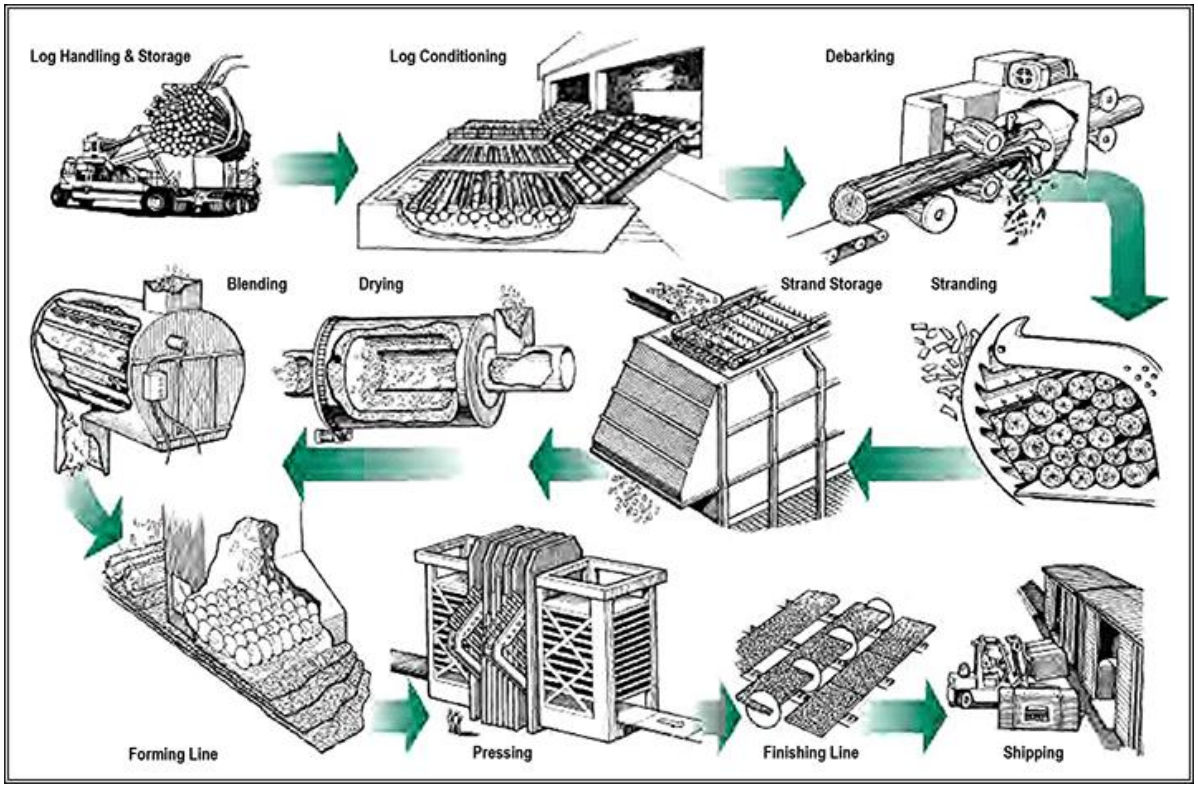

***OSB 3***

OSB 3 is the most progressive OSB type that is currently available. OSB 3 is developed and manufactured entirely in compliance with the current demand of ecological living focused on organic materials. Selecting suitable wood and binder, OSB 3 meets high standards of not only environmental buildings.

# Rock wool board

## Product Description

## Features:

Excellent fire resistance
Excellent thermal insulation
Excellent sound absorption
Can be machined, cut and shaped easily
High rigidity and light weight

| | |
|---|---|
| Density (kg/m³) | 80-170 |
| Melting Temperature (℃) | ＞1000 |
| Compressive Strength (kPa, 10% relative deformation) | ≥40 |
| Tensile Strength (kPa) | ≥80 |
| Acidity coefficient | ≥1.8 |
| Hydrophobicity (%) | ≥98 |
| Hygroscopicity (%) | ≤1.0 |
| Water absorption (kg/m2,partial immersion) | Short term(24h)≤1.0<br>Long term(28d)≤3.0 |
| Combustibility | Non-combustible A1 |
| Permanent Linear Shrinkage (%) | 750℃x0.5h≤8 |
| Mass Loss (%) | 750℃x0.5h≤10 |
| Thermal Conductivity (W/m.k,25℃) | ≤0.04 |
| Thickness Tolerance (mm) | ±3 |
| Flatness Tolerance (mm) | ≤5 |
| Standard Size (mm) | 1200x600x(25-100) |
| Package | shrink film or packed on pallets |

# Rock wool board

## Rock wool for industry

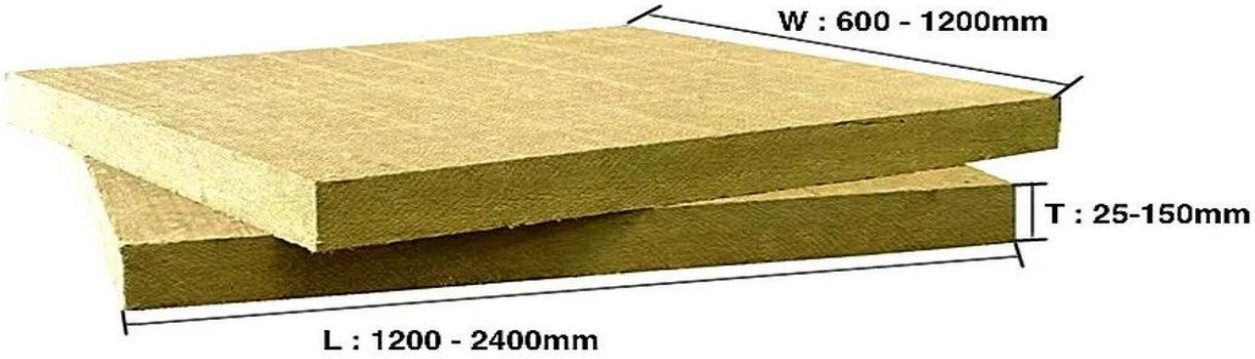

Industrial rock wool board has four perfect characteristics: high temperature resistance, good hydrophobicity, high corrosion resistance and low thermal conductivity, can provide the highest level of protection against heat and energy loss in the field of petrochemical, power plants, industrial tanks and other industrial equipment, to avoid fire, noise and other harmful effects.

## Rock wool for building

Exterior wall insulation thin plastering system is a kind of non-bearing insulation structure, consists of insulation layer, protective layer, fixed materials (adhesives, auxiliary fixings, etc.), and is fixed in the external surface of exterior wall, with performance of fire safety, heat insulation, waterproof, anti-cracking, anti-wind pressure and durability.

## Aluminum Foil Paste Rock Wool

**Noise reduction**

Has an open porous fiber structure that provides excellent sound insulation

**Moisture insulation**

Low thermal conductivity and moisture-insulating properties keep the interior warm in cold environments

**Water-repellent and moisture-proof**

It has good air permeability, even if there is water influx, it can be released through the pore structure, so as to keep the structure dry and mildewed by moisture

## Product Description

100mm Fireproof Aluminium Foil Laminated Rock Wool Board

| | |
|---|---|
| commodity | rock wool board |
| size | 1200*600mm |
| thickness | 30mm to 200mm |
| density | 50kgs/m3 to 200kgs/m3 |
| Conductivity | 0.037 |
| surface | no face,aluminium foil,wire mesh,cement etc |
| Hydrophobic rate | 98% |
| Combustion performance | A1 grade |
| Tailor made products are available<br>OEM,ODM is available | |

# PRODUCT INFORMATION

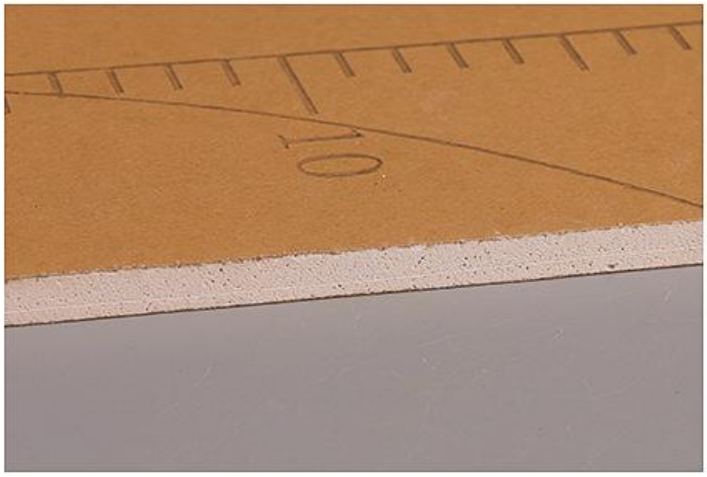

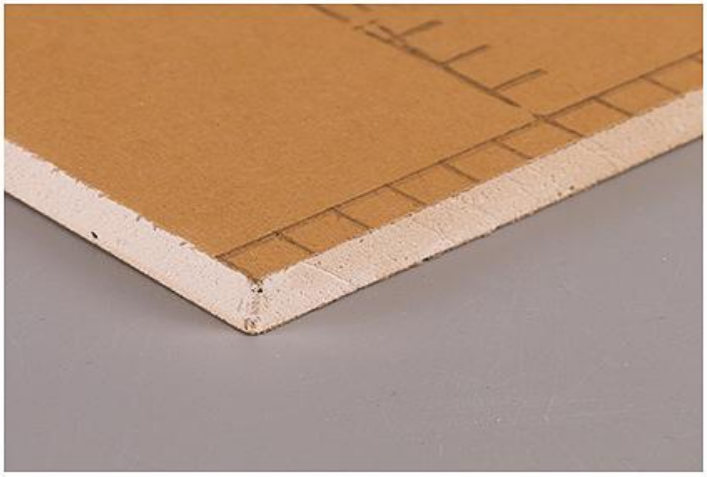

## 01 Sound insulation

The sound insulation effect of the double-layer separated sound insulation wall composed of thin plates and the double-layer sound insulation wall composed of hollow slats is about the same as that of a brick wall with a thickness of 24 cm.

## 02 Temperature adjustment

When the temperature in the air is greater than its own water content, the gypsum board can absorb the moisture in the air; otherwise, the gypsum board can release the moisture in the board, which can regulate the temperature of the indoor air.

## 03 Good construction

Gypsum board can be nailed: it can be sawed, glued, and convenient for construction. Using it for decoration can get rid of traditional wet operations and improve construction efficiency.

# Construction method

1、Install the expansion screw, fix the screw rod and hit the hook.

2、Install edge strips, main keels, and auxiliary keels T-shaped keels are fixed at intervals of 30CM.

3、Hole T-shaped keel to install the ceiling one by one.

4、Connect electrical wiring, install electrical appliances and electrical panels.

# Black annealed wire

Black annealed wire is black iron wire drawn from Q195 type wire rod.

**CRAFT:**
After selecting the raw material, it is calcined at a high temperature of about 1000° for a sufficient time, and then cooled at an appropriate speed. The purpose is to reduce hardness, improve machinability; eliminate residual stress, stabilize size, reduce deformation and crack tendency; refine grain, adjust structure, and eliminate structure defects.

**FEATURES:**
Softer and more flexible than ordinary black iron wire, with uniform softness and consistent color

**USE:**
Mainly used in construction, mining, chemical industry, welding mesh, welding clothes hanger, reprocessing, etc. After annealing, the iron wire becomes softer and its flexibility increases, which is better for building wire binding and steel bar binding.

| Material: | Processing method: | Tensile strength: | Size: |
|---|---|---|---|
| Steel wire | Cold rawing, annealing | 350-550MPA | 0.9/1.2*6 or Customized |

## PC STRAND

PC strand is a steel product made by winding multiple steel wires.Divided into prestressed steel strands (electrical), galvanized steel strands and stainless steel strands.

**CRAFT:**

Divided into monofilament manufacturing and stranded wire manufacturing, (cold) wire drawing technology is used to make monofilament, and electroplating or hot-plating treatment can be performed.The middle of the steel strand should be required to be other steel wires with the same diameter, strength and zinc layer, and the prestressed steel strand needs to be stabilized continuously after forming

**FEATURES:**

high tensile strength and elongation;low relaxation value;
small stress losing;excellent durable anti-fatigue performance

**USE:**

In construction, bridge, water conservancy and other projects, unbonded prestressed steel strands are mainly used in floor and foundation projects.

| Material: | Tensile strength: | Size: |
|---|---|---|
| High-carbon steel | 1860/<br>1960 | 12.7/15.7mm<br>coating unbonded 15.7mm |

## STEEL REBAR

Steel bar processing generally goes through four processes: steel bar derusting; steel bar straightening; steel bar cutting; steel bar forming.

**Classification:**

Production process : hot-rolled, cold-rolled, cold-drawn steel bars, and heat-treated steel bars made of grade Ⅳ steel bars through heat treatment, with higher strength than the former.

Functions in structures: compression bars, tension bars, erection bars, distributed bars, stirrups, etc.

**Standard:**

BS4449-2005,GB1449.2-2007,JIS G3112-2004, ASTM A615-A615M-04a,etc

**USE:**

Steel rebar are widely used in civil engineering constructions such as highways, buildings, bridges, and roads.

| Material standard: | Length | Diameter: |
|---|---|---|
| HRB335/400/400E/500 | 1-12M | 6-50mm |

## STEEL PIPE

Galvanized steel pipe is a welded steel pipe with a hot-dip or electro-galvanized layer on the surface.Divided into seamless steel pipe and welded steel pipe.

**Surface Treatment:**Galvanized/Black/Transparent oil,anti-rust oil

**Material:**Q195/Q215/Q235/Q345

**USE:**Structure, Accessorize,Construction,Fluid transportation, machinery parts,the stress parts of the automobile.

## Metal Formwork

**Material:**Steel/Aluminium

## Surface Finishing:

Electrophoresis, Hot-dip galvanized； Powder Coating

## Sizes:

2400*2200*120MM/2400*1800*120mm/2400*1200*120mm/
2400*300*120mm/2400*600*120mm/1200*600*120mm/
1200/300*120mm and we could design by the clientS' sizes and actual concrete requirement.

**Profile:**2.5MM thickness,120mm long

## Feature：

SAFE -The independent table with 6 directions moving restriction.It's a very stable system.

EFFICIENT - It includes only few components, set and removal are very simple. With early stripping mechanism,it can shorten the construction period and save your time.

REDUCED TOTAL COST - Thanks to the early stripping mechanism,the number of panels becomes less and the cost,transportation and storage is reduced.

MINIMUM OPERATORS - 3-4 workers in a team can quickly and easily set up and remove the panels.

# Shoring Props

## Light steel shoring system:

The holes located in the inner pipe at a 100 mm interval, can reach extensions varying between 50 and 500 cm.They are compatible with most accessories of other formworks and floors.

Props are the starting point in every multi-storey building onstruction. They are generally classified into: light props, push-pull props, forked props, props and loading towers.

Useful for making work in any construction worksite easier and faster.

## Feature:

»Drilled inner (with accurate precision and burr-free) every 100 mm so as to enable the adjustment of the prop;

» S235JR steel inner and outer pipe according to the UNI EN 10219-1 / 2 standard;

» 8 mm pitch threaded adjustment sleeve with welded handles;

» Male threaded directly onto the outer pipe, or welded, obtained through rolling-forming that is without removing material;

» Lower plate, available in flat or rounded version;

» Upper plate available in three versions (plate, crosspiece or fork);

» High resistance safety hook for fixing between the inner and outer pipe;

» Anti-shearing system which enables working under safe conditions at all times;

Upon request:

» Anti-disengagement system which enables quick release of the prop with little effort;

» Reinforcement at the foot consisting of mounting an extra 200mm tube on the outer one in proximity of the lower plate;

» Cast iron sleeve.

## Manufacturing scaffolding

## Bushing-type scaffolding

The easiest scaffolding to use due to its standardisation and the fact that it is quick to assemble and disassemble.

## Pin-type scaffolding

Standard scaffolding consists of metal frameworks with predefined height and depth. Quick to as_x0002_semble, quick to disassemble.

## Pipe-coupling scaffolding

with their variable geometry obtained by connecting pipes
by means of special couplings they can take any direction and angle.

Bushing-type scaffolding, pin-type scaffolding and pipe-coupling scaffolding how they differ.

Different configurations, same supreme quality.
However, each type is designed to perform at its best in different fields and applications.

## Professional ladder

The stairs are a safe, quick and functional solution for professional, intensive domestic and hobby work .
This tool moves without the slightest effort and when you no longer need to use it, fold up very easily making it take up little space.
It is used for finishing or maintenance work at heights that range from 1 to 7 meters.

## Feature:

Folding Ladders, Insulation Ladders, Telescopic Ladders
1.Extremely durable, novel appearance,elegant and beautiful.
2.Wrap around internal spreaders for strength and durability.
3. Non marring slip resistant heavy duty shoes.
4.High strength,impact resistance,high safety performance.

# Nail

## Material:
Iron,Q195, Q235

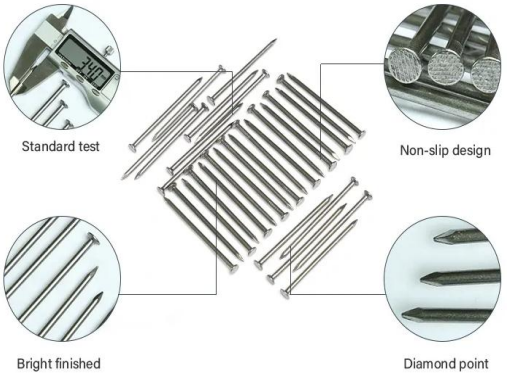

## Head:
countersunk checked head, flat head

## Features:
1)Nails have sharp heads and can easily penetrate into wood
2)Nail cap net pattern design,not easy to slip
3)The surface is smooth and flat,with metallic luster,whick is as bright as new after long-term use
4)Complete specifications to meet the needs of various sizes and lengths

## Treatment:
Electro galvanized,hot dipped galvanized,vinyl coated

## USE:
Building construction, decoration field, bicycle parts, wooden furniture, electrical component, household and so on

## Truss Nail Plate

Nail plates are used to connect two or more timber members together. They are available in a variety of sizes.

**Material :**Galvanized Steel Strip

**Surface treatment:**Zinc Coated

## Header member

* Supporting member: solid wood, glued-laminated wood, composite lumber, etc.
* Supported member: solid wood, glued-laminated wood, composite lumber, triangular trusses, profiles.

## USE:

Metal Framing Kit Bracket

* Post/beam connection
* Jointing
* Repairs
* Assemblies requiring a special bending on site, etc

## Aluminum alloy I-beam

## Material:

Alloy 6063,6061,6005 or according to customer's choice

## Surface:

Anodize, electrophoresis, powder coating, PVDF coating, wood grain painting, matted, etc.

## Alloy:

**6063/6061/6005/6082/6060**

## Features:

Compared with wood, the use of aluminum beams has great advantages. Aluminum is lighter and stronger than wood, so larger forms can be assembled, reducing fixing and erecting labor costs.

## USE:

Aluminum profile for formwork

| Size | Weight |
|---|---|
| Length:1.2-7.2M<br>W/D:130,180,230,140mm<br>customized | Excluding wood 3.2KG/M<br>Containing wood 3.8KG/M<br>customized |

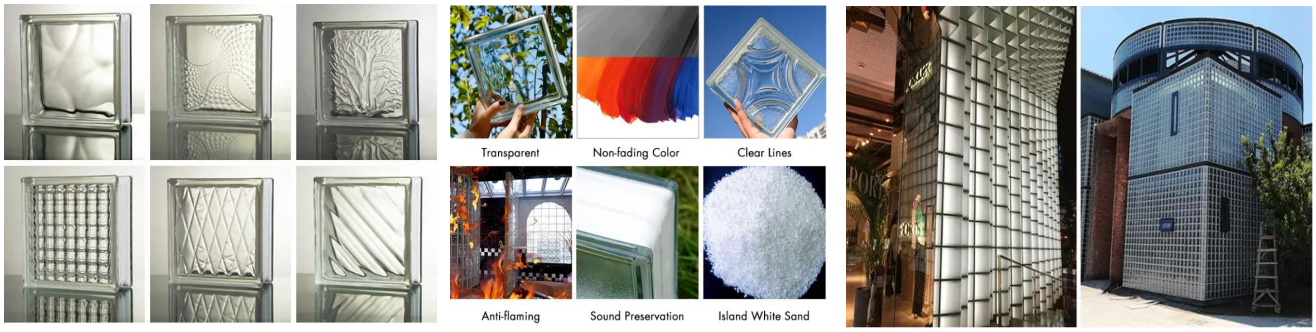

Various specifications of aluminum alloy Aluminum profile for formwork can be customized.

## GLASS BLOCK

Glass block is made by glass sand, soda ash, quartz powder & other silicate which melted in high temperature. It has no poison, no pollution, no peculiar smell, and takes no encroachment to human's body. It is green environmental protected production in reality as well as in name. Glass block is a new building decorated production.

## Structure:

Hollow

## Features:

1. PERVIOUS TO LIGHT BUT NOT TRANSPARENT
2. SOUND INSULATION
3. HIGH THERMAL RESISTANCE
4. HIGH INTENSITY
5. ABLE TO ENSURE CORROSION
6. HEAT PRESERVATION
7. MOIST INSULATION

## USE:

On wall decorated in the room or outside.

# POLYCARBONATE TILE

## Material :

Resin, Fiberglass and additive

## Features:

Transmittance:The light transmittance can reach 90%, which is the same as the glass with high transmittance and far exceeds the traditional FRP plate.
Impact resistance:Impact strength is 250 times of ordinary glass, is 30 times of traditional FRP lighting tile.
Fire retardant:PC sheet flame retardant B1 level,no toxic gases are produced when burning,self-extinguishing after leaving the fire.
Anti-corrosion:it resist chemical corrosion and its life span is over 3 times longer than zinc panels
Low noise:When it rains,the noise is more than 30db lower than the metal roofing.

## USE:

Outdoor roof cover, Greenhouse Skylight Carport Awning,roofloor.etc.

## Mosaic Ceramic

**Material Feature:**Durable, Wear-resistant, easy to clean

**Mateiral:**Ceramic, porcelains

**Function:**Antibacterial, Heat Insulation, Non-Slip, Wear-Resistant, Anti-slip

**Features:**

* Matt finish
* Premium quality for Kitchen and Bath backsplash wall and floor
* Water proof and color persistent
* Heavy duty for both commercial and residential usage
* Pool tiles

**USE:**Hotel, swimming pool/kitchen backsplash.

## Film Faced Plywood

Our Piano Singer Leonking plywood produce all kinds of plywood and blockboard for clients from all over of world based on different standard and system. Format sizes are 1220x2440 /1250x2500 /610x2500 /1500x3000 /1525x1525 mm, thickness from 9mm to 30mm, or customized.

**FILM FACED PLYWOOD**: includes normal film faced plywood, one side anti slip film faced plywood, circular film faced plywood and plastic overlay film faced plywood. Meanwhile, we can produce melamine/phenolic glue overlay plywood too. Main purposes are for concrete formwork, decking, box, and store/warehouse shelves.

An example of the variety of suitable uses for our special coated plywood include:
Cement-Formwork Template System
Smooth-shuttering,moulds,furniture
Mesh-Vehicle bodies,walkways,staging
Hexa-vehicle bodies,flight cases,packaging
Diamond-Flight cases,packaging

# Instructions for Use and Maintenance of Formwork Panels

USAGE

The formwork panels are mostly used in construction for concrete shuttering. Before usage, the user/contractor should check whether the panel surface quality is sufficient for the desired concrete surface quality. As the formwork panels are made of solid wood, wood texture can be visible on the concrete surface. Therefore, the formwork panel producer does not undertake any responsibility for the quality of the concrete surface. After use, traces of the edge protective varnish on the concrete surface may also be visible.
The panels are supported at intervals as specified in the diagram of intervals in the producer's brochure.

When assembling or disassembling formwork panels, utmost attention should be paid to minimising the damage to the panels through the use of saws, nails or other fasteners. You should also be careful not to damage the surface of the boards with a hammer or sharp objects. Such damages inevitably affect the quality of the concrete surface.

Before applying concrete, the panels should always be treated with formwork oil and thoroughly moistened/sprinkled with water in order to minimise the risk of the concrete sticking to the panels. You should be very careful when removing the shuttering especially if the panels are nailed, screwed or fastened in any other way. It is essential to prevent the falling of the panels from greater heights and any resulting damage which might occur.

MAINTENANCE

After use, the panels should be cleaned of all residues and placed on a flat surface. For the protection of the shuttering, a paraffin paste or formwork oils should be used in accordance with the producer's instructions. The panels should be kept in a covered and shady place. If stored outdoors, the panels should be covered with a sheet shall (a tarpaulin plane) protecting them against harmful weather conditions (sun, rain). If the panels are exposed to the sun, splits and/or cracks may appear on the outer layer. Such panels must be properly moistened with water before next use! Apart from that, fading (discolouration) may appear on the surface protection, which, however, does not significantly affect the functionality of the panel. Due to the components and the colours of wood, the panels may stain brownish when exposed to rain.

WARNING

In extreme weather conditions (significant deviations from normal humidity and temperature, or longer periods of dry and hot weather) you should take extra care of the shuttering, mostly making sure that the panels are not exposed to the heat of the sun for longer periods. Should you fail to do so, longitudinal cracks on the outer layer may appear, which significantly affect the lifetime of formwork panels and the quality of the concrete surface. Such panels should be properly moistened with water before use, otherwise they might be permanently damaged due to the intrusion of the concrete emulsion into the cracks!
Moreover, wooden formwork panels contain certain wood components, such as tannic acid or resins, which might cause stains on the concrete surface.

# *Laser cutting UV coating birch plywood*

## Advantages

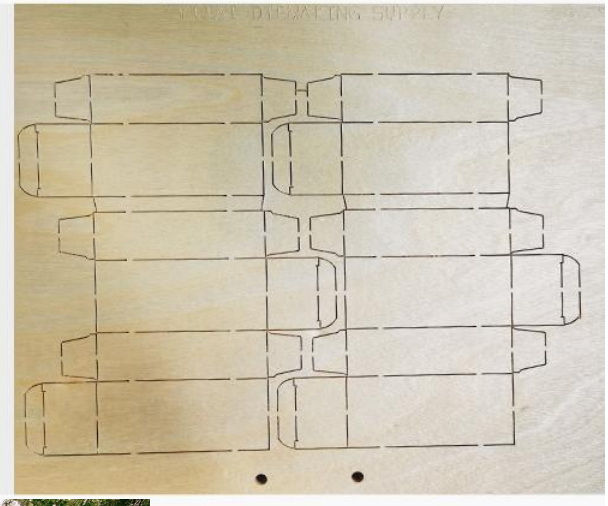

### Tight thickness Tolerance

Flatness is good. The thickness tolerance of the whole board≤0.2mm

### UV Coated

Can effectively prevent the loss of moisture while ensuring the surface is clean

### Environmental Protection

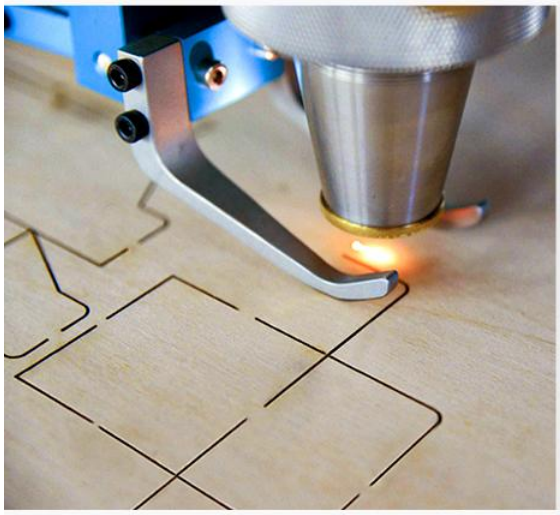

Our product UV coating Birch plywood has reached The E0/E1 Grade

# CDX PLYWOOD

## Application:

CDX Plywood is the most used product in the construction industry for the foundation of building and roofing due to its sturdy nature.
It is dense and heavy due to pressing a large number of plies together, making it a preferred and cost-effective solution.
Pianoplywood is a leading producer of CDX Plywood in China focus on a high-quality product and service.

## CDX is a specific type of plywood and not a thickness indicator.

•**1/4-inch** – thinner plywood will break. For CDX plywood, you shouldn't use anything less than 1/4-inch, which works for indoor projects and cabinetry.
•**3/8-inch** – only slightly more significant than the minimum safety allowance. If you want something that won't break without adding too much, this will work.
•**1/2-inch** – very common. 1/2-inch plywood is the most common size, and if you're unsure which size you need, then 1/2-inch will work for any project.
•**5/8-inch** – also typical for most projects. While not as popular as the next larger or smaller size, it does work well. If it's available, then go for it. You won't regret the decision.
•**3/4-inch** – ideal for thickness, but isn't too wide for most projects. The plywood isn't recommended for interior projects due to its weight. For exterior projects, this works well.
•**1-inch and more** –if it's thicker than 1-inch, you should know beforehand what your project will entail. Projects requiring greater durability would use plywood thicker than 1-inch. Projects requiring greater durability will use plywood thicker than 1-inch.

## CDX stands for:

•**C –** veneer grade for one strip of plywood.
•D – veneer grade for one strip of plywood.
•**X** –glue used to connect both veneers. This makes the plywood durable and rugged. It has nothing to do with "exterior."

## *Frequently Asked Questions (FAQ)*

### *Is OSB The Same As CDX Plywood?*

*OSB is not the same as CDX plywood. While they can both be used for similar projects, they aren't entirely interchangeable.*

### *What Happens if CDX Plywood Gets Wet?*

*CDX plywood is made for outdoor use. It can absorb water without harming the wood and will dry out quickly. But it should always have a moisture barrier in place and be covered with some type of covering, like roofing.*

### *Is CDX Plywood The Best Plywood?*

*CDX is considered the best in many cases. However, there isn't a number one plywood overall. There is simply the best plywood for each job. The prettiest is A grade, while the strongest is D grade.*

### *Is CDX Plywood Treated?*

*CDX plywood is not necessarily treated. You will need to look for the term "pressure-treated" on the plywood itself if you want to know. The plywood grade is not related to whether it is treated.*

### *Is CDX Plywood Fire-Rated?*

*CDX plywood is better to use around fires than other plywood. But the treatment is really what affects the fire-rating. Treated wood is more fire-resistant than untreated wood, so check for this detail.*

### *What Is The Difference Between CDX And ACX Plywood?*

*The difference is that ACX plywood will have a pretty and delicate side, while CDX will look much rougher. One side of the ACX plywood will be sanded and smooth.*

# Melamine Film Panel

PIANO

*Colour Melamine on a panel substrate is a versatile interior panel commonly used in a range of shelving, furniture and joinery applications. Commonly colour melamine particleboard is either overlaid with colour decorative paper on both sides of the board, or overlaid with colour decorative paper and edged along one long side.*

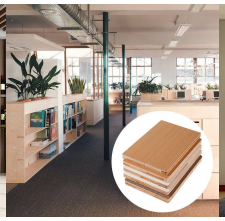

## *Applications*

*Furniture , Cabinet , Bureau , Decoration , Handicraft.*

*When used for general shelving in wet areas or spaces with high relative humidity, it is advisable to use a moisture resistant (MR) particleboard substrate . Standard for Melamine on a Particleboard accepts minor imperfections on one face of the overlaid panel based on visual grading. Where an application or specification is sensitive to imperfections in the face, it is recommended to visually inspect any board for suitability prior to use . Routine cleaning simply involves wiping with a clean, damp soft cloth. Never use abrasive cleaners, scourer pads ( eg : wire or copper cleaning pads) or sandpaper, or subject to excessive wetting. A useful source for more information and general facts about plywood such as mechanical , physical and moisture properties is the EWPAA.*

## Bendable Plywood

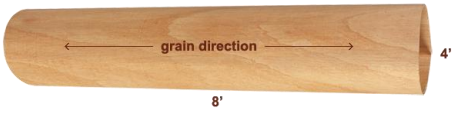

**Bendable Plywood** is a unique product for the ease with which it can take any curvature and rounded shapes, including “S” or circular. **Bendable Plywood** is suitable in the creation or the coating of curved columns, arches cabinet applications, curved furniture parts and fixtures in restaurants, reception and office work stations, stage sets, spiral stairways, boats, caravans, and interior architecture in general.

**Features and advantages**

– Cold forming with small radii (with no need for heat forming or water treatment).
– Self-supporting structure eliminates the need for structural skeletons or special supports.
– Complex multi-radii shapes can be quickly and easily prepared.
– The panels can simply be combined and glued together to create different thicknesses (8,10, 13, 16, 18, 20, 21 mm, etc.).
– More convenient than other pre-made wood forms.
– Reduction of material and labour costs to a minimum.
– No need for special equipment or prior experience.

4’*8’ long grain column bend (1/4” 3 ply product)

8’*4’ cross grain barrel bend (1/4’’ 3 ply product)

| | |
|---|---|
| Format size: | 1220*2440mm (bengding in the longest dimension) |
| Thickness: | Up 3 to 5 millimeters. |
| Standard | CE,FSC,CARB,ISO 9001,SGS |
| Application | Counter fronts , wavy walls , ceilings , stage and film sets. |

# Bendable Plywood

| Technical specifications | |
|---|---|
| Bending radius for a 5 mm board | about 50 mm |
| Bending radius for a 8 mm board(4mm panel*2 glued) | about 100 mm |
| Bending radius for a 16 mm board(4mm panel*4 glued) | about 300 mm |
| Longitudinal elasticity for a 5 mm board | 210 N/mm$^2$ |
| Cross elasticity for a 5 mm board | 6300 N/mm$^2$ |
| Thickness tolerance | +/- 0,35 mm |
| Length tolerance | +/- 5 mm |
| Width tolerance | +/- 5 mm |
| Tolerance in squaring | 2 mm/m |
| Moisture content (at delivery) | 8-12% |
| Reaction to fire (EN 13501-1) | D-s2,d0 – Dfl-s1 |
| Thermal conductivity (EN 12664) | 0,12 W * (m k)$^{-1}$ |
| Density (EN 323) | about 400 kg/m$^3$ |

**Bonding** (*formerly called IF20*) is made with urea-formaldehyde glue (UF) and is in compliance with the provisions of the EN 314-2 standard.
After suitable treatment in view of resistance to humidity, the board complies to **Class 1** requirements for the use of boards in dry environments (EN 636-1).
*Class 2 (formerly called AW100 or MR), for uses subject to exposure to moisture variation, can also be produced upon request with melamine gluing.*

**Usage and storage instructions**

– Store the panels lying flat in a clean, shaded, dry place.
– Panels should be transported on a hard flat surface. Single panels can be rolled, but should not remain in this position for long periods.
– Do not expose the panel to sudden changes in humidity, temperature, and also protect it from sunlight.
– Glue the panels while they are brought into the desired shape. When the glue is dry, panel will retain its shape.
– High Pressure Laminate or paper-backed veneer can be applied during the initial curving process, or in a second step.
– Any wood glue can be used.

# Fire Redartant Plywood

PIANO

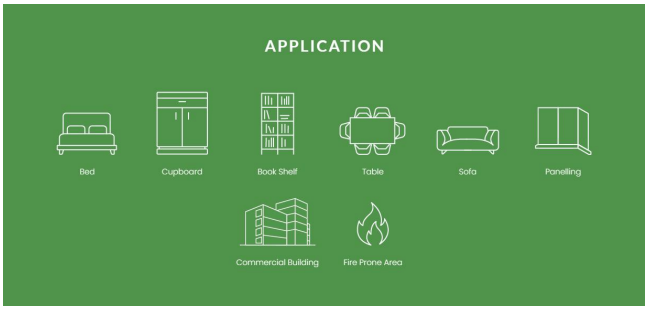

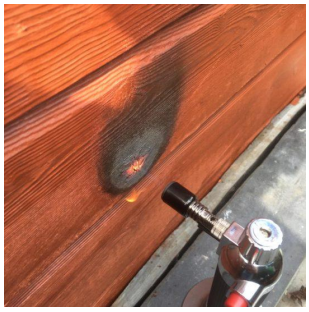

*•The protective char is non-hygroscopic in nature. It will not affect the hardware elements that may corrode due to moisture affinity of common chemicals.*
*•The chemical is non-leachable hence there is no loss of the retardant chemicals in very adverse conditions. Does not affect painting or overlaying.*
*•No significant effect on the strength properties (adhesive bonding) compared to normal grade (BWR, BWP) plywood*
*•Its slow rate of burning provides sufficient time for the fire to be extinguished.*
*•Unlike common ply, Archidply Firesafe ply creates a barrier against fire, due to its slower fire penetrating rate.*
*•Nail and screw holding property is not affected.*
*•Tensile and bending strength remain unaffected, as the chemical does not react with wood.*

| | |
|---|---|
| Size: | 1220*2440mm , 1250*2500mm. |
| Thickness: | 4mm – 30mm. |

## Fance Veneery Overlay Plywood

*Top quality fancy veneer overlaid plywood base board same as common plywood(poplar , eucalyptus , pine , birch , hardwood , combi core and so on), face/back with all kinds of sliced fancy veneers from solid woods(ash, birch, cheery, walnut, teak, beech, oak, elm and so on).*

## *Advantage*

*Uniform material quality, dense lamellar structure, the surface flat and smooth, not easy to deformation, stable performance, the edge light and smooth, not easy to collapse edge and layered, non-toxic, tasteless, non-radiation and good air permeability. Good thermal insulation performance, not aging and strong adhesion.*

## *Application*

| | |
|---|---|
| Format Size: | 1220*2440mm , 915*1830mm , 1250*2500mm , 1500*3000mm(customized according to requirements). |
| Thickness: | 3.0mm – 30mm (customized according to requirements). |
| Core: | Common plywood (poplar , Eucalyptus , pine , birch , hardwood , combi core) |
| Raw Material: | Natural Veneer – red oak / white oak / sapele / beech / okoume / Burma teak / recon / bamboo silk. |
| Standard | CE,FSC,CARB,ISO 9001,SGS,BS 1088,AS/NZS 2272,PEFT,EN 314,BS EN 350,ISO 14001. |
| Face/back | One side or both sides overlaid by melamine film , melamine film with all kinds of grains(single color , wooden , stone and so on). |
| Glue: | WBP(melamine) , phenolic. |
| Application | Use where appearance of plywood is not important for interior application as furniture. |

# Blockboard

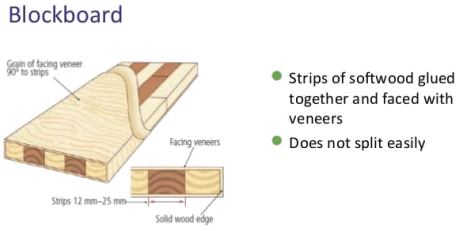

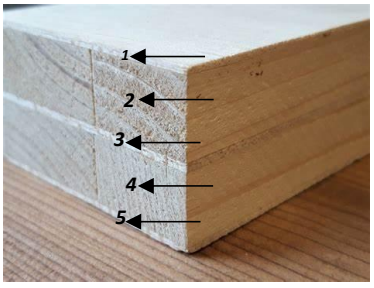

***Construction:***

*Block board is made up of a core of softwood strips. The strips are placed edge to edge and sandwiched between veneers of hardwood. A single veneer on both sides is known as 3-ply. A double veneer on both sides is called 5-ply. The sandwich is then glued under high pressure.*

•***Veneered blockboard*** *is a kind of fancy block board base decorative panel.The blockboard also can laminate the HPL,melamine paper. But the most important is the selecting of right base board and face & back veneers for this kind of veneered blockboard.We suggest to choose the good quality block board as the base board.And then face the wood veneers for the face and back of the blockboard.*

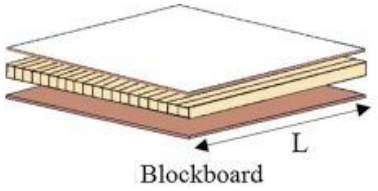

***1. Face : peeling/slice/Engineered wood veneer/HPL/Melamine film/decorative epaper/polyester film/UV Coating/HDF/plastic.***
***2. 1-2 layers peeling veneer***
***3. Core: laminated solid wood strips , poplar core , paulownia core, malacca core , hardwood core , fir core , pine core.***
***4. 1-2 layers peeling veneer***
***5. Back: same as per no.1 , or blance layer. which can make the full sheets of veneered block board have a better stability***

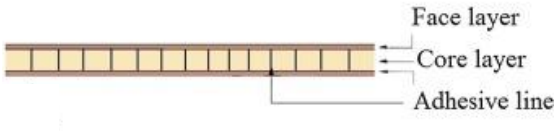

| | |
|---|---|
| Format size: | 1220*2440mm , 1500*3000mm |
| Thickness: | 15 to 40 millimeters. |

## WPC WALL PANEL

Material： wood-plastic Composite
Environmental Material
Surface : Wooden grain,,
Feature: Waterproof, fireproof, moisture proof, durable and hard, easy installation

WPC WALL PANEL
1) 100% recyclable, eco-friendly, saving forest resources
2) With the look of the natural wood but no timber problems
3) Water resistant, no rotten, proven under salt water condition
4) Barefoot friendly, anti-slip, no cracking, no warping
5) No painting, no glue, low maintenance
6) Weather resistant, suitable from minus 40° C to 60° C
7) Insects, and moldy-proof
8) Available in different colors
9) Easy to install and clean

# Installation

## Step 1

Cut the wall panel to the appropriate length, and apply styrofoam on the back.

## Step 2

Stick the wall panel on the wall and fix by air nailer.

## Step 3

Fix the wall panel to the wall in turn with clips.

## Step 4

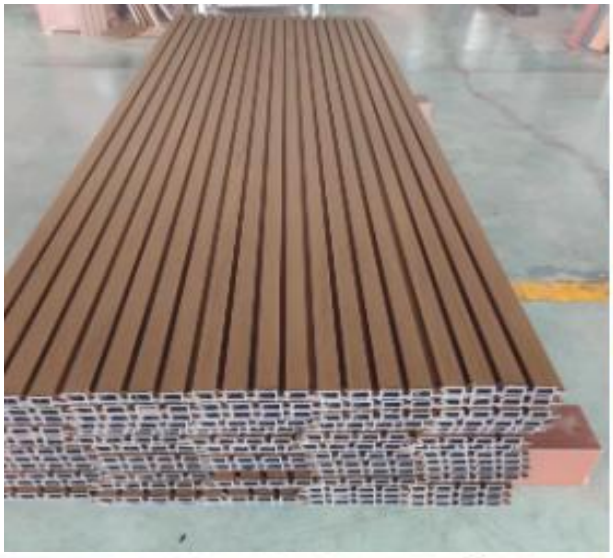

Glue the L corner and stick on the wall panel, the installation is finished.

## WPC Floor

**Feature:**

1、Wood-plastic composite flooring has a strong sense of wood, with natural wood texture and no cracking.
2、WPC material has high density, no deformation, no water absorption, wear resistance, and long service life.
3、Strong UV resistance, stable color; there are many colors to choose from, no need to paint, and maintenance-free for life.
4、Wood-plastic composite material has the characteristics of both plastic and wood, and it does not rot or moth-eaten.
5、Wood plastic material can be embedded with steel pipes, the material is not deformed, and the installed structure is very firm.
6- Good machinability and relatively simple installation method.

A generation of plastic wood flooring

3D three-dimensional embossed plastic wood floor

The second generation co-extruded plastic wood flooring

SIKLE SCD™

**Stone Plastic Composite** vinyl flooring is more and more popular new style ecofriendly vinyl flooring. SPC rigid flooring is set apart from other types of vinyl flooring by its uniquely resilient core layer. This core is made from a combination of natural limestone powder, polyvinyl chloride and some stabilizers. SPC vinyl is a luxury vinyl flooring option with a structurally rigid, 100% waterproof core. SPC is also known as rigid core vinyl, and we use these terms interchangeably. Rigid core engineered vinyl flooring is designed to look like wood or stone, but requires less upkeep.
This flooring is durable, waterproof, and perfect for DIY installation. It's ideal for both home and commercial areas.

# Product Description

1. Product name: melamine door skin
2. Advantage: Mould the solid wood fibre to be raised panel under high temperature and pressure with advanced technology. No shrink, no split, great compatibility. Elegant veneer makes it fresh and classic.
3. Finishing: Natural Wooden Skin Veneer
4. Specifications: Length: 2050-2160mm; Width: 620-1050mm; Thickness: 3.2mm.
5. Technology parameters:
a) Density: Above 820 kg/cbm
b) Moisture: 5 - 10%
c) Water absorption rate: <28%
d) Modulus of elasticity: <40MPa
e) Tolerance: Length/width<2.0mm; Thickness<0.1mm
6. Patterns: Many kinds of designs
7. Veneer: Natural or engineered, many kinds available, such as sapele, ash, okoume, cherry, walnut, teak, oak, ect.

# Outdoor Bamboo Decking

Outdoor Bamboo Decking uses a unique high-temperature, high-intensity compression process to remove sugar molecules from the bamboo, making the bamboo free of fungi and microorganisms. This solves the problem of anti-corrosion and insect resistance and by changing the water-absorbing groups inside the bamboo, thereby solving the problem of deformation and cracking, the material density, hardness and flexural strength are much higher than any wood.
Outdoor Bamboo Decking remains straight and very stable even after many years of installation.
Bamboo Decking is the ideal outdoor material.

SIZE: Length 1860/2000/2500/3000/4000mm
Width 68/140mm,
Thickness:18/20/30/40mm,
Density:1200Kg/cm$^3$
Surface:Flat, Small Groove, Small Waves, Big Waves
Application:Private countyard, garden, park, seaside, hotel, swimming pool.

SIKLE SCD™

# Installation procedures for outdoor decking

1、 Preparation of concrete floor: Level the ground to be laid on the outdoor floor and pour 10-15CM thick concrete.

2、 Fixing the keel: Use an impact drill or electric hammer to punch holes (about 10-12mm*60mm) on the concrete floor, one every 40cm (less than 40cm is counted as 40cm), drive pine wood plugs into the holes, and place them on the keel. Punch holes on the keel, the hole diameter is the same as the steel nails used, and the hole distance is the same as the ground hole distance. Then use 4*80 round nails to drive through the keel.

3、 The clear distance between the keels is not more than 500mm, and it is recommended to use 400mm for the interview; the installation of the keels should be kept horizontal to ensure that the entire decking installation is completed and the buckles are flat and there are no obvious bumps;

4、Fixing method:

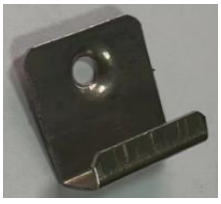

1）Sweep fixing method (for floors with grooves on the side): When installing the first board, use flat-head stainless steel self-tapping screws 4*45 on the outward side at a 45-degree angle, and the rest can be connected and fixed with floor connectors: specific The fixing method is as follows: firstly insert one side of the floor fastener (face up, the hole is perpendicular to the ground) into the slot of the first floor, and then press the side of the second floor against the first row of planks. Fasteners, insert the second row of floor fasteners on the other side of the second floor (the number of floor fasteners is the same as the keel), and then insert the third decking board... Install in sequence , about 4-8 pieces, and then use self-tapping screws to pass through the decking fasteners to fix the decking on the keel; the decking is installed in this order. The installation method of the last piece at the end is the same as the first piece, and the outward side is fixed with a 45-degree oblique screw from the rose screw.

2）Direct fixing method (for floors without grooves on the side): The first step is to place the outdoor floor in the required position, and then punch 2-3 holes evenly on the board surface along the center of the keel, with a diameter of 4mm and a depth of 35- 40mm; in the second step, use a drill with a diameter of 10mm to ream the top of the floor, and the depth is 2-3mm; in the third step, use 5*50 stainless steel countersunk head screws to drill the drilled holes to firm the floor.

# Maintenance of outdoor floors

1. Maintenance cycle: The first maintenance is carried out in the third month after the paving is completed; the second maintenance is carried out in the ninth month after the paving is completed. Subsequent maintenance can be carried out once a year.

2. Maintenance method: choose a sunny day after the floor is dry (it is recommended to carry out at least one week of continuous sunny weather).
1）Check for tightness: Check the floor for looseness and reinforce loose floors.
2）Cleaning and Sweeping: Clean up all corrosion, dust, dirt, oil, coal ash and other impurities on the floor surface. Before protection, the surface must be completely cleaned; clean the debris around the floor and the keel to make the drainage smooth
3）Sanding: Use a soft steel brush to sand and clean the floor surface.
4）Oiling: Use the first coat of wood wax along the length of the brush.
5）Grinding: Use 80-100 grit sandpaper to polish the surface burrs.
6）Second oiling: Use a brush to apply the second wood wax oil along the length.

3. Precautions:
1）Immediately after use, put rags, brushes, and waste into metal containers to keep them clean and hygienic
2）The second pass of wood wax oil is carried out 12 hours after the first pass of brushing.

# Outdoor Floor Care and Maintenance

If we can carry out regular maintenance in accordance with our company's maintenance precautions, we have reason to believe that our customers can use heavy bamboo outdoor "new floors" every year.

To reiterate, the first maintenance should be carried out in the third month after the installation of the heavy bamboo floor of our company; the second maintenance should be carried out in the ninth month after the installation is completed. Subsequent maintenance can be carried out once a year.

# Bamboo benefits

*SIKLE bamboo is one of the fastest growing plants on earth. Although giant bamboo is formally not a wood but a grass, it has excellent hardwood like characteristics. Discover the benefits that SIKLE Bamboo products can offer in your project!®*

## Endless resource

*Bamboo is an 'endless' resource. It grows faster than any other plant; up to 1 meter per day! Each year the 4-5 year stems are harvested, providing room for the younger bamboo to grow to maturity. During growth SIKLE bamboo absorbs more CO2 than is released during production. All solid SIKLE bamboo products are therefore guaranteed $CO_2$ neutral over the complete lifecycle.®®*

## Natural beauty

*The most striking feature of SIKLE Bamboo products is certainly its natural beauty. The beautiful natural grain gives bamboo a distinct design appearance. Combined with the vast choice of different styles, configurations and colors, there is always a SIKLE bamboo product available which will match your preferences.®®*

## Hard & durable

*Bamboo, after processing, is very hard and durable. This means SIKLE Bamboo flooring and decking can be used in heavy duty applications, where conditions such as high-traffic are expected. As well as this, several products are more than suitable for being used outdoors.®*

## High stability

*Due to the composition of individual strips, bamboo will shrink and swell less than most solid wood species, providing a very stable solution. This means that unique and intriguing solutions and creations can be developed.*

BAMBOO DECKING

SIKLE SCD™

## *High stability*

*Due to the composition of individual strips, bamboo will shrink and swell less than most solid wood species, providing a very stable solution. This means that unique and intriguing solutions and creations can be developed.*

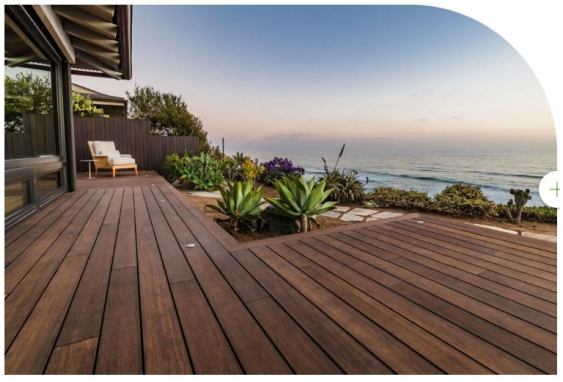

## *Healthy and fire resistant*

*SIKLE Bamboo products are also a healthy choice as they are antistatic and anti-allergic. Further they have very low emissions of harmful VOCs (Volatile Organic Compounds). Due to the high density, several SIKLE Bamboo products fulfill stringent fire safety requirements and SIKLE has tested almost the full range of bamboo products.®®®*

## *A wide variety of choice*

*Combined with the vast choice of different styles, configurations and colors, there is always a SIKLE Bamboo product available to match the desired needs. From commercial to domestic use and industrial applications to unlimited solutions, SIKLE SCD has both the knowledge and expertise to help you progress.®®*

## *Up to 20 years guarantee*

*Developing the best bamboo product is only possible through continuous attention for each detail during production. The Chinese SIKLE team was created just for that. Only because of their daily effort a SIKLE Bamboo product is very different from a standard Chinese bamboo product. And in the unlikely case that something was overlooked customers can count on our full support and guarantee up to 20 years.®®*

SIKLE SCD™

# Maintenance of Soffit and Cladding

1.Maintenance cycle:
Dust the dust on the surface of the wallboard with a duster every two weeks or one month, which can effectively reduce the adsorption of dust on the surface and prolong the use time.

2.Maintenance and cleaning method：
The film on the surface of the wallboard has a certain degree of air permeability, and the stain must be cleaned up in time to prevent it from being adsorbed to the inside of the wallboard for a long time. The best time to decontaminate is to scrub the dirt in time before the dirt is completely dry. The order of cleaning the dirt should be from the outside to the inside, rinse with an absorbent sponge block, do not use hot water. Remember not to use sharp objects, so as not to scratch the surface of the wallboard.
1) Oil stains: for local oil stains, pour the neutral detergent stock solution on a towel to wipe; for large areas of oil stains, increase the number of wipes, and then wipe dry with water.
2) Rust: Dilute it with a neutral detergent, leave it on for 10 minutes, and then remove it with water.
3) Ink, coffee, juice: Dilute with neutral detergent, then remove with water.
4) Nail polish, paint, glue: first carefully remove the dirt, then wash it with alcohol, and remove it after the dirt softens.
5) For the walls near the balconies and windows, when strong light must be irradiated, the curtains should be drawn to avoid discoloration and fading caused by long_x0002_term sunlight.

## Feature:

Bamboo isn't a plant,it's a lifestyle Eco-friendly & sustainable exactly meet the concept of social development,endless possibilities to make your idea comes true.

## Application:

Interior decorative, exterior building ,school, museum,hotel, project solution

# Product information

SIKLE SCD™

Bamboo plywood is made of fine layers of bamboo strips laying in parallel order.The strips are kiln dried, sanded smooth and then laminated edge to edge to create a single-ply panel.These panels are then laminated again to each other to create a multi-ply bamboo plywood with free formaldehyde emission. The multi layers are cross-laminated and heat pressed together to provide stability and to prevent warping.

Specifications:

1.Color: Carbonized / Natural /Zebra /Strand/Mosic
2.Construction: Vertical/Horizontal
3.Material: 100% solid bamboo
4.Moisture: 10% +/-2%
5.Density: 750-850Kg/cm3
6.Adhesive: Urea Formaldehyde Free
7.Modulus of rupture>30Mpa
8.Modulus of elasticity>6000Mpa

Laminated Bamboo

# Solid Bamboo Fence

## Bamboo Benefits

SIKLE SCD™

### Bamboo growth

*Bamboo is a grass species known for its rapid growth and versatility. Bamboo species can grow up to 90cm per day and reach maturity in just a few years. Bamboo is considered one of the most sustainable and environmentally friendly plants in the world. Bamboo requires very little water, pesticides or fertilizer to grow, and it can be harvested without destroying the plant.*

### No Pesticides

*Bamboo is generally considered a very low-maintenance plant that is resistant to most pests and diseases. Therefore, it does not require the use of pesticides to grow successfully.*

*One of the reasons why bamboo is considered a low-maintenance crop is that it has a very thick and dense canopy that helps keep out weeds and other potential resource competitors. In addition, bamboo has a very extensive root system that provides access to water and nutrients deep in the soil, making it less dependent on fertilizer.*

### Doesn't need much water

*Bamboo is known for its drought tolerance and low water requirements. Many species of bamboo can grow well in areas with limited water resources and can thrive in both dry and wet climates.*

*Bamboo has a very deep and extensive root system that allows it to draw water and nutrients from deep within the soil, which helps it survive in times of drought. In addition, bamboo has a thick and dense canopy that helps to shade the soil and reduce evaporation, which in turn helps to conserve water.*

# Bamboo Benefits

SIKLE SCD™

## Bamboo absorbs CO2

*This is because bamboo is a fast-growing plant that can reach maturity in just a few years. To make that gorie possible, bamboo can extract large amounts of CO2 from the air in a short period of time and use it to grow its leaves, stems and roots.*

*A study has shown that one hectare of bamboo can store about 60 tons of CO2 over a 20-year period, which is roughly equivalent to the amount of CO2 emitted by an average car that drives about 12,000 kilometers per year.*

## Easy composting

*When bamboo is harvested, it leaves behind a large amount of organic material in the form of leaves, stem and root remnants that can be used in composting.*

*Bamboo contains a lot of cellulose and lignin, two important ingredients for good composting, and it breaks down quickly, creating a good balance of carbon and nitrogen. Also, because bamboo is a grass, it contains a lot of silica, which can improve the structure of compost.*

# Frame Bamboo Fence

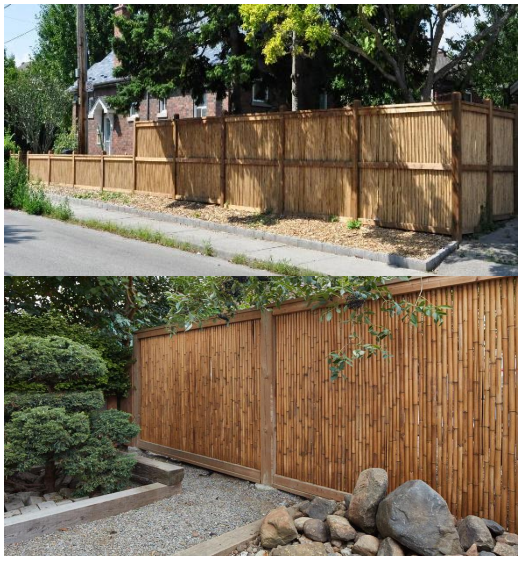

SIKLE SCD™

## Frame bamboo fence

SIZE:
- Diameters: Ranging from 3/8"-5"
- Lengths: Ranging 4'-16'

## DESCRIPTION

*Tonkin bamboo is easy to work with and is available in a number of colors choices. The most common is a beautiful "even" honey appearance throughout the poles, and compared to other bamboo species, has the least amount of variations or scaring. The Natural Black Tonkin bamboo is a dark richer color option, that is more unique than the traditional "golden" color that is most often recognized. Compared to other bamboo, Tonkin is light weight making it ideal for overhead applications. Although available in larger diameters, this species of bamboo is thin walled. Performance of Tonkin is best when used outside of heavy guest contact areas and is widely used for exterior and interior applications.*

## APPEARANCE:

- Natural: Honey/Tan
- Brown
- Black
- Speckled

*Colors will vary slightly based on harvesting and finish. Naturally straight versus milled.*

## APPLICATIONS:

*Interior or Exterior Casing, wall cladding, ceiling coffer's, privacy fencing, batons/purlins, trim, retail fixtures, false ceiling beams*

# Willow Fencing

SIKLE SCD™

**Willow Fencing**

*SIZE:*
*Height:6 feet*
*Length:16 feet*
*with a ½ inch gap between each branch*

## DESCRIPTION

*Willow fencing, durable, lightweight and, boasting a rich brown appearance is an ideal product selection whether rustic charm or contemporary appeal is the design intent. Constructed of individual freshwater willow's and fastened by a thin, discrete wire, willow fencing is ideal for wall and ceiling coverings, column cladding, privacy screening and is an excellent substitution for unsightly construction fencing. Easy to install···Willow Fencing can be easily secured to vertical and horizontal posts by utilizing the wire and fastening with an electrical staple. Overhead applications can be secured with pin nails directly through the willow and wire connection.*

## APPEARANCE:

*Espresso*
*Colors will vary slightly based on environmental factors*

## APPLICATIONS:

*Interior or Exterior*
*Construction and privacy fencing, wall and ceiling coverings, cabinet inlay, wrapping columns, framed room divider/infill.*

# Reed Fencing

SIKLE SCD™

## Reed Fencing

- 6 Foot Height
- 16 Foot Length (Total with both Fences is 32 Feet Length)

## DESCRIPTION

*Constructed of freshwater reed grown along riverbanks and wetlands that are fastened together by thin horizontal wires. Reed Fencing panels are ideal for adding a touch of authenticity to a tropical environment. The product is often used commercially as construction fencing in lieu of unsightly typical construction barriers and, for privacy screening. Reed fencing can also be used as a wainscoting wall treatment or ceiling treatments. To create a more custom look, consider staining or white washing our Woven Bamboo Plywood. Easy to install···Reed Fencing can be easily secured to vertical and horizontal posts by utilizing the wire and fastening with an electrical staple.*

## APPEARANCE:

*Honey & light beige with speckles of mocha*
*Colors will vary slightly based on environmental factors*

## DURABILITY:

*Best suited for interior applications or exterior applications covered and clear of direct exposure to the elements. Speak with your SIKLE SCD Rep to discuss the many ways that you can extend the life of the product and alter the appearance.*

## SIZE:

*Sheets: 6′ x 16′*

## APPLICATIONS:

*Interior or Exterior*
*Construction and privacy fencing, wall and ceiling coverings, cabinet inlay, wrapping columns, framed room divider/infill.*

SIKLE SCD™

SIKLE Fence

SIZE:

- Diameters: Ranging from 2"-3.5"
- Lengths: Ranging 4'-8'
- Height : Up to 8'

SIKLE Fence Application

## DESCRIPTION

*Our hearty SIKLE Fence poles are a choice selection when looking for a timber that is unlike the others. The variations of brown running vertically throughout the pole and "swirls" or knots, provide a uniqueness that is sure to make your project a standout. SIKLE Fence also takes stain very easily and can be brought to a deep, rich finish by applying teak oil or paste wax.*

## APPEARANCE:

*Beige, medium and dark brown (with mahogany hues)*
*Colors will vary slightly based on harvesting.*
*Naturally straight versus milled. Knuckles branch off slightly*

## APPLICATIONS:

*Interior or Exterior*
*Fencing, shade structure, handrails, retail fixtures*

*Note: To ensure your fence has the longest useful lifespan and avoid accelerated rot, be sure to keep the bottom of the fence slightly raised above the ground level to avoid moisture being 'wicked' up into the fence. This is especially true for our SIKLE Fence.*

# About us

Sikle grass is the most trusted producer and supplier of artificial grass anywhere in the world. Our experience spans decades and continents for both interior and exterior use, focusing on , domestic,sports, leisure, commercial, retail and educational environments.

Sikle grass was first conceived over 20 years ago purely as a residential grass and wall plant producer. The sport and leisure side of the business began to grow significantly with the development of our modern grasses and the creation of the most natural looking products available on the market.

At Sikle grass we can quite safely say that we are at the cutting edge of the artificial grass industry. We are expert for all garden decoration filed includes stone, planter, fence, fountain, especial on artificial grass and Pagola.

With increasing demand for our products and services in the Europe and Middle East market. Sikle grass decided to pay more attention on one stop service for our clients and end users. We are transforming people's gardens, play areas and balconies and giving a fresh new look to events and commercial premises.

Please take your time to read our brochure and find out more about sikle grass.

# Artificial Grass

# Why us

**WHY SIKLE GRASS?**

• LOW-MAINTENANCE

Generating savings on time and up-keep costs. This applies to homeowners, the elderly for whom maintenance is not viable, second/holiday homeowners and, organizations such as schools, hotels, and hospitals.

• NO WATERING

Artificial grass is ideal where water is scarce or the expense to maintain a garden is comparatively high. For those on water meters, artificial grass ensures there's no wastage of water – during warm weather, it's estimated that as much as 40% of residential water is used to irrigate lawns.

• BETTER FOR THE ENVIRONMENT

Artificial lawn; no need for pesticides and mowing

• DURABILITY WITH VISUAL APPEAL

Ideal for effective, minimal maintenance landscaping and play areas. You will have a lush green garden, all seasons.

• NATURAL LOOKING

Our artificial garden turf products are identical to real grass. You will see that our bi-colours models are extremely close to natural grass.

• WARRANTY

The quality of products offered by sikle grass is so premium that you don't have to worry about it once installed.

# Domestic

Sikle grass is designed for and perfectly suited to garden life. Our grasses, designed in the UK, look so natural that they are often mistaken for the real thing. It has taken us years to perfect our design but we believe that our products are the most realistic anywhere in the world.

Artificial grass transforms your garden into the perfect place for kids to play games, for parties, for pets and for simply relaxing with the family.

The Sikle grass artificial grass system creates a safe surface that will encourage your family to spend more time in the garden. As part of our artificial lawn system we offer an Easi-shockpad underlay which is placed under the Sikle grass and will produce a certified critical fall height' of 1.3m, or more, so the kids can fall without hurting themselves. At Sikle grass we want your kids to have as much fun in the garden as possible but we also want to protect them from injury.

If you're wondering about the best way to keep your kids safe, clean and happy outside - then look no further than Sikle grass.

# Artificial Grass

## PETS

If you have pets, artificial grass is the perfect surface for your garden.
It is so suitable for those who have pets that kennels often install artificial grass in their exercise runs.
The durable nature of the grass and the way it is constructed allows for any urine to drain straight through. Anything more solid can be removed easily. The grass won't be harmed by their mess and there won't be any staining.

## SWIMMING POOLS

It is extremely difficult to keep the grass by the side of a swimming pool looking its best, especially if it's continually walked on when wet. We've all seen those muddy patches by the side of pools. Syntheticgrass will keep your pool surround in perfect condition and looking green all year. Just as importantly though you never need to cut artificial grass so you don't need to worry about cuttings from the lawn mower entering the pool and blocking the filters.

Sikle grass artificial grass will act as a slip proof surface even when wet whilst also maintaining a soft and comfortable texture.

## TERRACES, BALCONIES & ROOF GARDENS

Have you have ever looked at your balcony and wondered how you can create a more natural inviting look? Well, Sikle grass artificial grass is the answer. Roof terraces and balconies are rapidly becoming one of our most popular installations. Homeowners now realise that they can transform a previously bland or unattractive terrace into the centerpiece of the entire property that will transport you from the hectic pace of city life into a tranquil oasis. You won't just see the difference with Sikle grass but you'll feel it as well. Why not have a garden party on the roof and show your friends!

# commercial

## HOTELS & REAL ESTATE DEVELOPMENTS

The ongoing cost of maintaining green areas in any development, whether it is residential or commercial, can be extremely expensive; a cost that any developer or hotel manager would like to save. Combining the natural look of our artificial grass and the significant cost saving for the developer, Sikle grass is the answer. Sikle grass can also help obtain significant LEED points for your new commercial or residential development.

## MUNICIPALITIES & LOCAL AUTHORITIES

Municipalities and local authorities face a dilemma when building amenities and infrastructure for the community. On one hand it is imperative to create green, attractive spaces for their residents and on the other it is important to spend municipality funds wisely. Large expanses of grass are very expensive and time consuming to maintain. Sikle grass looks great all year round and is inexpensive to maintain.

## SHOPS & RETAIL DISPLAYS

Sikle grass is great if you want to create a natural, green look inside your store. No mess, just beautiful green grass for your customers to see.

## INTERIORS

Why not give your office a makeover with some Sikle grass. Your employees will love it and you'll instantly feel closer to nature.

## EXHIBITION DISPLAYS & TRADE SHOWS

Sikle grass is perfect for trade shows and exhibition stands. It can be cut to any desired shape and easily installed on any stand.

# schools & play areas

At Sikle grass we specialise in playground and school safety surfaces using our Easiplay system. The Easiplay system uses our Easi-shockpad under your chosen artificial grass and offers varying critical fall heights to protect children should they take a tumble.

With a play surface that reduces injury together with the most realistic artificial grass available Easiplay is proving to be the way forward for schools and nurseries.

# sports

Sikle grass sport has installed over 1 million square metres of sporting turf and has earned a global reputation for quality craftsmanship combined with great value. When it comes to sports, Sikle grass has the answer.

From 5-a-side pitches to FIFA approved premiership training grounds, including Chelsea FC, Sikle grass Sport has it covered when it comes to football. We have installed pitches for private individuals, football clubs and schools all over the world. Our years of experience in the sports market ensure Sikle grass installations meet the highest performance standards in world football.

We are also able to install facilities for golf, rugby, tennis, hockey and cricket.

## Artificial Grass

# our products

Sikle grass artificial grass products are the most realistic in the world. They are manufactured to the highest worldwide standards and are guaranteed to be safe. We have been designing artificial turf for 20 years and we have recently pioneered some outstanding innovations to enhance our products.

**UV STABLE GRASS**
Our artificial grass has excellent UV Stability. As we know the sun can be very damaging, especially in the Middle East. All our products have had a UVA and UVB defender applied and can withstand the fierce rays of the sun.

**SAFETY FIRST**
We want to make sure our clients have peace of mind and feel comfortable in the knowledge that they are buying a safe product. All our products are lead free and free from any heavy metals as well as other harmful chemicals. All of our products are safe for children and pets.

**FULLY GUARANTEED**
All of our products are guaranteed for 6 years although their normal life span is 15 – 20 years.

# Installation & Maintenance

## Laying Plan Artificial Turf

A good prepared artificial grass installation plan is important to avoid running into problems during installation. We will always do a site visit first to take a measurement and then draw up an installation plan. This way we can know exactly how the grass will lay and how many seam joints are needed. This enables us to work as efficiently as possible and finish the job fast. When we draw up the installation plan, we will also take the viewing directions into account, these are the places from which the lawn will be most viewed and the position of the sun in relation to the garde

# Warranty

**Installation Step 01**
**Remove existing earth/dirt/sand down to the required depth.**
Our irrigation experts will arrive at your property before the main installation team arrives. They will cap off any irrigation pipes and test the system to make sure that after we have left there are no issues with the irrigation leaking. The main team then arrives and we begin our first step major in the Easigrass installation process. This stage is the most time consuming part of the installation. We use a selection of tools to help us move as quickly but we also need to be as careful as possible as there are often irrigation pipes and electrical wires in and around lawns. We will dig down to the required depth, which is usually around 6cm. The reason we need to remove the existing grass is to make sure that there in no living vegetation left in the lawn once we have finished installing your new artificial grass lawn. Anything that was living needs to be removed so that there is no chance of it re-growing and ruining the artificial grass. Any weeds or grass roots need to be totally removed so that they don't try and grow back through the grass. Normal sand and soil is also not suitable to have artificial grass installed on it either as it is not stable enough so it needs to be replaced with more solid base material which we will get onto later on.

**Installation Step 02**
**Water and compact remaining earth/sand/soil.**
Once we've removed all existing earth we are left with a rough bump and lumpy surface which needs to be flattened and compacted so that it is as hard as possible, almost like a foundation for the rest of the base. It will still be permeable but will now be hard, firm and flat, this give us a great start to the rest of the base system. We use the Easi-Wacker plate for this part of the base work.

**Installation Step 03**
**Install interlock/brick edging**
This is often the stage of the installation that confuses our clients as it looks as if we are adding an extra edge to the lawn. Well, actually we are, but it's not an edge anyone will be able to see. These interlock bricks sit under the grass and give us something solid to glue to. Many companies use nails, spikes or simply leave the edges. We never use any metal anywhere near our grass; we have removed lots of old installations where the previous installers have used metal spikes and over time the metal has rusted and has become extremely dangerous, especially for anyone with bare feet, we don't ever want to take this risk. Leaving the edges is also not an option; in Dubai and the Middle East temperatures can fluctuate so much during the day and night that the grass will try to expand and contact all day every day. In order to prevent the grass from rippling it needs to be secured down at the edges so that it can't move. If it isn't secured it will curl up an ripple within days.

**Installation Step 04**
**Geo-textile layer**
Once the earth is nicely compacted and the new edging is in we fit a heavy-duty geo-textile membrane to act as a weed barrier. This Geo-textile layer is like a thin paper sheet, it acts as a further barrier to prevent any organic matter that has managed to survive from growing up through the grass installation. As well as preventing any growth is also acts as a stabiliser separating the compacted earth and the aggregate base, which is the next part of the system.

**Installation Step 05**
**Base material**
We now introduce a crushed rock aggregate to form the new base. This material is easily compactable and creates a solid, stable base, perfect for artificial grass. We spread it out over the geo-textile membrane and then carefully level it by hand making sure it is perfectly flat and even.

**Installation Step 06**
**Compact the new aggregate base.**
Once the base has been levelled by hand and watered thoroughly we compacted it over and over again in order to get the perfect finish but once it has been given the correct amount of attention it will be incredibly even and feel extremely solid whilst still remaining porous.

**Installation Step 07**
**Check the new base levels are perfect**
We check the base levels with a straight edge to make sure that when the artificial grass is being installed it is going down on a perfectly flat and smooth surface.

WA Buiness

**Installation Step 08**
**Supply and fit your chosen Sikle grass.**
Now comes the fun part, your Sikle grass artificial grass is ready to go down. First we work out the best direction for the pile of the grass to face. All fake grass products will tend to lean a fraction in one direction or the other. Some products more than others and some you can hardly even tell but all products will have a direction. We assess the area where the grass is going and where there will be the least seams possible combined with the best viewing angle we make our decision on how to to install the grass. Once the uncut rolls are in place we will then firstly rough-cut then grass so it's easier to work with. We then trim the grass to the perfect size and make sure it's a great fit for the new base and edging.

**Installation Step 09**
**Gluing and preparing the seams**
We open up the prepared seams of the grass so that we can insert our glueing tape easily. We then apply glue to the specialist seaming tape using our in-house deigned gluing machine. The glued tape is stretched out along the seam and then the seams are closed onto the tape. This gives a perfect fit and leaves the seams virtually invisible.

**Installation Step 10**
**Close the seams**
This is where experience and product knowledge come into play. When the seam is closed it should be about 97% invisible, sometimes under the correct circumstances the seam can totally disappear but generally speaking if you know where to look you will be able to detect it ever so slightly. The technician will look for areas along the seam that are more visible than others and trim the grass accordingly. Only our most experiences installers work on the seams.

**Installation Step 11**
**Apply artificial grass glue to all edges**
Once all the seams are closed and have been meticulously checked we then move on to gluing the edges of the system to make sure there is no movement once the installation is finished. Once the glue is in place on the edges we attach the grass and apply pressure in order to create a very strong bond.

**Installation Step 12**
**Apply the sand Infill**
Once the grass is cut into place and all the edges and seams are glued it's time to get the sand on as quickly as possible. The sand does three important things. It weighs the whole system down to stop it moving whether from shrinkage, wind or heavy use. The sand infill also helps to keep the fibres standing upright for as long as possible and also protects the backing of the artificial grass carpet that could be pierced or damaged. The sand we use though isn't beach sand or dune sand it's a special kind of sand called silica sand that is actually the broken down mineral, quartz. It's the same white sand you see in bunkers on golf courses. It's a very clean and very round sand so it protects the artificial grass blades and the base of the grass. Once the sand has been applied to the grass it needs to be massaged into the fibres so that it sinks right to the bottom of the grass and sits on the backing material. We do this using a blower and a power brush to evenly distribute the silica sand throughout the installation. Once we've been over the installation with the blower and the brush the sand is totally invisible but will remain there throughout the life of the grass protecting it.

**Installation Step 13**
**Silica sand levelling**
Once the silica sand is in the grass we find any areas that feel slightly uneven and Using a blower we evenly distribute the sand throughout the installation so that the grass feels nice and even underfoot.

**Installation Step 14**
**Clean up**
Lastly we give the installation a quick spray with water and a final brush with the power broom in the opposite direction to the pile. Any dust that has settled on the grass fibres is washed away and the lawn glistens in the sunlight ready for handover.

SIKLE SCD™

# Product details

Material:HDPE Virgin Material
Available Width:10cm , 12cm , 15cm , 20cm, 25cm
Hole Diameter:10mm ,12mm ,20mm
Length:50m, 100m
Color:Black, GREEN,OEM
MOQ:1*20FCL
Application:For Garden, Park, Landscape, Green Belt, etc

**Product Features**
1),Weatherproof, reusable
2),Green belt, reduction of grass color, modeling is not abrupt
3),Neatly dividing gravel, lawn, flowers, beautifying the garden
4),Separate different plants for better growth and development
5),High toughness, foldable at will, high degree of freedom in design
6),Simple and convenient operation, remarkable effect of grass and stone isolation
7),Environmentally friendly PE material, non-toxic and tasteless, corrosion-resistant, cold-resistant and heat-resistant, durable

SIKLE SCD™

## Feature：

1. Installing a tree grate in the tree pool can protect the roots of trees, reduce soil erosion, and promote the growth of trees.
2. The tree box can make the tree pit parallel to the sidewalk, reduce the hidden danger of passers-by being tripped, and beautify the urban environment.
3. It is convenient for artificial pouring, improving labor efficiency and saving water resources.
4. Reduce the cost of tree maintenance, and solve the problems of affecting the city appearance and polluting the environment due to excavation.

# How to use?

SIKLE SCD™

01

Accurately measure the size of the tree pool and the diameter of the tree, and then cut the tree grate according to the size.

02

Align the cut tree grate with the direction, and then fasten the T-shaped buckle on the side.

03

Anywhere can be cut at will according to needs.

# Product Description

SIKLE SCD™

**Heat preservation, moisturizing and breathable, anti-freeze and anti-sun, easy to operate and labor-saving, light, soft and beautiful.**

The trunk antifreeze insulation belt is made of fiber material through needle punching. This kind of insulation belt is also called "needle punched cotton".

It has good heat preservation and moisture retention, and has the advantages of softness, light weight, and changeable color. Wrapping the trunk with this insulation tape can effectively prevent the trunk from being damaged in winter.

Frost damage can also prevent damage to the trunk and sun protection. This kind of thermal insulation belt is wrapped around the trunk with traditional straw ropes, straw, and sacks

Compared with it, the advantages are very obvious:

1. One person can complete the operation smoothly. It is 8 times faster than the traditional two-person winding grass rope, saving labor and speeding up.
2. The price of winding the same tree is 20% lower than that of straw rope, and it can be reused more than three times.
3. Light weight and good elasticity can reduce the load on the trunk.
4. Various colors, smooth surface, anti-aging, which is conducive to the display of landscape benefits;

# How to use?

Wrap up from the base of the trunk, generally 1.5 meters high. The general thickness is 2.5mm, the length is 18m, and the width is 12cm. Due to the stretchability of the cloth, there is a certain error in the size.

# Product Description

SIKLE SCD™

Material: UV-resistant HDPE or pp flat wire braided
Colour: Black
Uses: For gardening flowers and plants, weed control, insect control, heat preservation, ventilation, water seepage, etc.
Features:

1. Prevent weeds on the ground.

Because the grass-proof cloth can prevent the direct sunlight on the ground (especially the black grass-proof cloth), and at the same time use the strong structure of the grass-proof cloth itself to prevent weeds from passing through the ground cloth, thus ensuring the inhibition of the growth of weeds by the grass-proof cloth effect.

2. Remove the accumulated water on the ground in time and keep the ground clean.

The drainage performance of the grass-proof cloth ensures the rapid discharge of ground water, and the pebble layer and medium sand layer under the grass-proof cloth can effectively inhibit the reverse seepage of soil particles, thus ensuring the cleanliness of the grass-proof cloth surface.

3. It is beneficial to the growth of plant roots and prevents root rot. This effect is also derived from the woven laying structure of the weed-proof cloth. This structure can ensure that the roots of the crops do not produce water, so that the air in the roots has a certain degree of fluidity, thereby preventing the roots from rotting.

Thickness: 80 grams (0.08kg/square meter)

# Product Description

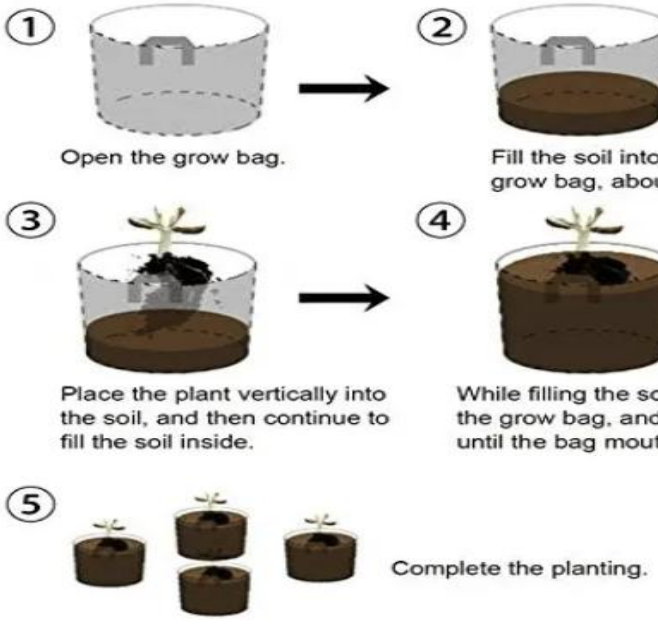

SIKLE SCD™

Material: non-woven fabric
Color: White/Black
Uses: Used for nursery stock ultivation/
tree transplantation.
Features: The tree planting bag is a tree planting bag made of needle-punched non-woven fabric. Stable quality, uniform fabric, anti-aging, fully permeable and breathable, good moisture retention and fat retention. (Especially in areas with dry sweat, little rain and sandy soil in the north, the survival rate of transplanting can be increased by more than several times.) At the same time, seedlings can be transplanted for many years without being affected by seasons. After transplanting, a large number of roots are preserved, and the return period is short.

# Product Description

Pebble stone are widely used in public buildings, villas, courtyard buildings, paved roads, park rockeries, bonsai filling
materials, garden art and other high-rise superstructures. It not only celebrates the ancient culture of the East, but also
reflects the classical and elegant Western style, returning to the basic art style.

Material:100% Natural Stone
Size:6-12mm,10-20,12-20mm, 20-30mm, 30-50mm, 60-90mm, 100-150mm, etc.
Color:white, black, yellow, etc.
Finished:Natural, Polished, Tumbled.
Usage:Driveway, Home Decorations, Garden, Landscaping, Decoration or Paving Material.
Packing:Packed in 20/25KG PVC bag then in Bulk woven bag(or wooden pallet)

PIANO

**NO.:**QG090108
**Product Name:**
CE
**Material:** Cotton jersey lining and nitrile
**Feature:**
1.Durable material: Super non-slip and abrasion resistant, acid and alkali resistant, these heavy duty work gloves are fully coated with NBR nitrile rubber to resist oil, work efficiently in oily wet work environments and enhance the glove's super grip
2.Multi-purpose: The highest performance task-specific gloves are widely used in petrochemical oil transportation, oil refining, construction machinery maintenance, concrete sewage wells, contact stains and oily work environments It can give you peace of mind to work in greasy and dirty environments
3.Easy to put on and take off: safety cuff work gloves are wider and longer, which can effectively prevent debris from splashing and improve work efficiency
4.Comfort: Lightweight cotton support lining fits your fingers, breathable, sweat-wicking, strong grip
5.Non-slip, Abrasion Resistant, Acid and Alkali Resistant, suitable for oil transportation and oil Contact stains oily utility gloves, fuel business delivery driver, soil drilling industry, butane transportation
6.Applications: janitorial, maintenance, refining, fishing, petrochemicals, mining and utilities

# Protective glasses

Name: welding protective glasses
Model: QG090301
Shape: Glasses
Material: PC lens
Function: anti-splash, anti-shock
Color: Clear/Black/Gray
Scope of application: household use, chemical field, industrial field

## PRODUCT DETAILS

① **Fine material**
High-strength PC material lens, high transparency, strong UV absorption, shock resistance and crack resistance, not easy to scratch

③ **Wind and Splash Resistant**
Windproof, prevent chemical liquids, pesticides, etc. from splashing on the eyes, causing damage to the eyes, acid-resistant, and protect the eyes.

② **Temple design**
Widened temple design, suitable for any head size, humanized design, comfortable and stable to wear

④ **Integrated design**
Glasses integrated design, simple atmosphere, convenient storage and storage.

# Protective glasses

Name: Double Flip Welding Glasses
Model: QG090302
Shape: headband
Material: PC lens
Function: anti-splash, anti-shock
Color: Green
Scope of application: household use, chemical field, industrial field

## PRODUCT DETAILS

① **Fine material**
High-strength PC material lens, high transparency, strong UV absorption, shock resistance and crack resistance, not easy to scratch

③ **Eye protection design**
The design of the part that fits the contours of the face is smooth and reasonable, and will not cause stretch marks on the face, which is comfortable and convenient

② **wide webbing**
Wide cotton webbing design, fine webbing at the seam, compact texture, good elasticity, not tight on the head, and the connection part is firm

④ **Clamshell design**
The protective goggles are clamshell type, the inner layer is transparent PC to remove the lens, the outer layer is black protective sheet, double protection

PIANO

Name: Aluminum frame screen
Model: QG090401
Shape: Headband
Material:PVC panel/aluminum alloy bracket
Function: Anti-splash,
Color: White
Scope of application: Household use, chemical field, industrial field

## PRODUCT DETAILS

① **Fine material**
High-strength PC material lens, high transparency, strong UV absorption, shock resistance and crack resistance, not easy to scratch

③ **Head frame design**
The design of the head frame is humanized, and the size of the porous design is adjustable, which is convenient to adjust the size, suitable for any head circumference, and comfortable to wear

② **Plexiglass**
One-piece plexiglass, the vision is fresh and wide without barriers, easy to wear, and no visual distortion

④ **Detachable process**
The mask and headgear are detachable and replaceable, which is convenient and trouble-free to operate.

# Safety mask

PIANO

Name: All Organic Face Masks
Model: QG090402
Shape: Headband
Material:Bing material
Function: Anti-splash,
Color: Clear/brown/blue
Scope of application: Household use, chemical field, industrial field

## PRODUCT DETAILS

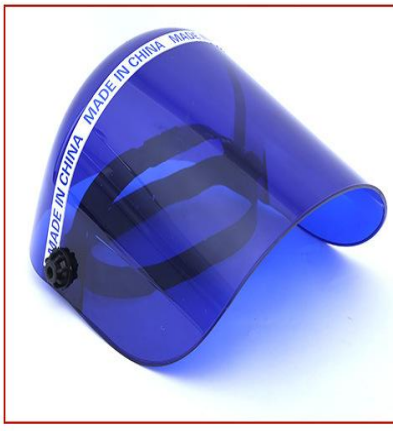

① **Fine material**
Priority Bing material manufacturing, high transparency, strong UV absorption, shock resistance and crack resistance, not easy to scratch

③ **Head frame design**
The design of the head frame is humanized, and the size of the porous design is adjustable, which is convenient to adjust the size, suitable for any head circumference, and comfortable to wear

② **Plexiglass**
One-piece plexiglass, the vision is fresh and wide without barriers, easy to wear, and no visual distortion

④ **Detachable process**
The mask and headgear are detachable and replaceable, which is convenient and trouble-free to operate.

# Safety mask

PIANO

Name:Color changing light mask
Model: QG090403
Shape: Headband
Material:PE/electronic lens
Color: Black
Scope of application:
Electric welding, industrial fields, etc.

## PRODUCT DETAILS

① **Fine material**
Made of PE material, high degree of protection, anti-seismic and crack-resistant, fully protects the face

② **Solar battery**
Relying on arc light charging, turning waste into blessings, energy saving and environmental protection, convenient and fast

Phone/WhatsApp/WeChat:+86-13311891208

# Safety mask

PIANO

Name:Color changing light mask
Model: QG090404
Shape: Headband
Material:PE/electronic lens
Function: Anti-splash,
Color: Black
Scope of application:
Electric welding, industrial fields, etc.

## PRODUCT DETAILS

① **Fine material**
Made of PE material, high degree of protection, anti-seismic and crack-resistant, fully protects the face

③ **Auto dimming**
The polarizer design in the liquid crystal has the function of eliminating glare, automatic conversion, and the outline of the object is clear when working

② **Solar battery**
Relying on arc light charging, turning waste into blessings, energy saving and environmental protection, convenient and fast

④ **Headband bracket**
There is a fixed knob on the headband, which can adjust the tightness according to the size of the head, and the design is humanized.

# Safety mask

PIANO

Name:Semi-automatic mask
Model: QG090405
Shape: Headband
Material:Red steel paper
Color: Red
Scope of application:
Electric welding, industrial fields, etc.

## PRODUCT DETAILS

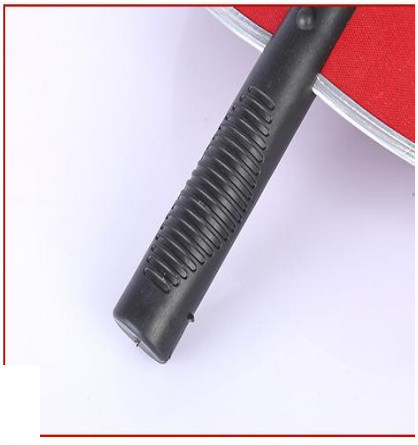

① **Fine material**
Made of red steel paper material, high degree of protection, anti-seismic and crack-resistant, fully protects the face

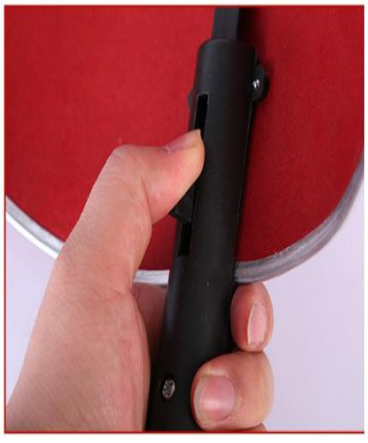

③ **Face screen design**
The color of the lens can be adjusted manually, which is effective in preventing arc light, easy to operate, and saves time and effort

② **Hand top design**
The handle is fixed with screws, and the mask is covered with metal for a long service life

④ **Handheld design**
The handle is designed according to the principle of ergonomics, and the hand-held welding mask is easy to carry.

# 三筋透气型

THREE-TENDON BREATHABLE TYPE

01

**Three reinforcements**

This ABS material is thickened, and the top of the hat is designed with three ribs to reinforce and increase the ventilation holes, which is safer and more breathable

02

**Thick lining**

Four-point strong support lined with cushioning and shock absorption, the distance between the underwear and the shell is 25~50MM, and the shell will not deform when it is impacted

# Safety helmet

## Strong shell

The cap shell is made of imported glass fiber reinforced plastic material, which is strong and resistant to smashing, and has higher hardness and will not deform under impact!

## Eight point lining

The hat lining has eight points of strong support, and the four cotton webbing belts greatly enhance the cushioning of the helmet!

## Forehead lining

The sweat-absorbing strip on the forehead is designed to enhance shock absorption, comfort and breathability, and prevent sweat from flowing into the eyes during work!

## Button cap buckle

The button-type cap buckle on the back of the head is easy to use with one-button operation, and it locks the helmet firmly to prevent it from falling off!

# Correct use of paint brushes and roller brushes

1.Before painting, immerse the bristles in the paint to half the height. If you are worried that the bristles will get too much paint, you can pat it on the paint can. There will be no dripping or drooping phenomenon during construction.

2. When painting, hold the handle of the brush between your thumb and forefinger, and apply force with your fingertips to bend the bristles slightly to get a better painting effect.

3. Brush from the unpainted part to the part that has been painted, and avoid repeated brushing on the part that has not been painted, so as to make the brush surface smooth. The advantage is that the brushing force is easy to control, the consumption of consumables is less, and it does not contaminate adjacent equipment.

1. Although the roller is less time-consuming than the brush, but due to the roughness of the surface of the roller, different lines will be produced, and the brush marks will be less smooth.

2. Choose a suitable roller size, and avoid using oil-based paint, so that you don't have to work hard when rolling. Before painting, roll the roller into the paint tray and turn it slightly to make it full of paint, then move it to an inclined surface and roll it to distribute the paint evenly.

3. When painting, paint in the form of broken lines, use M,W or inverted N to roll up and down, and fill the blanks evenly. The advantage is that it has a hand-made feel, which is quite suitable for DIY.

# Galvanized C Channel Lock

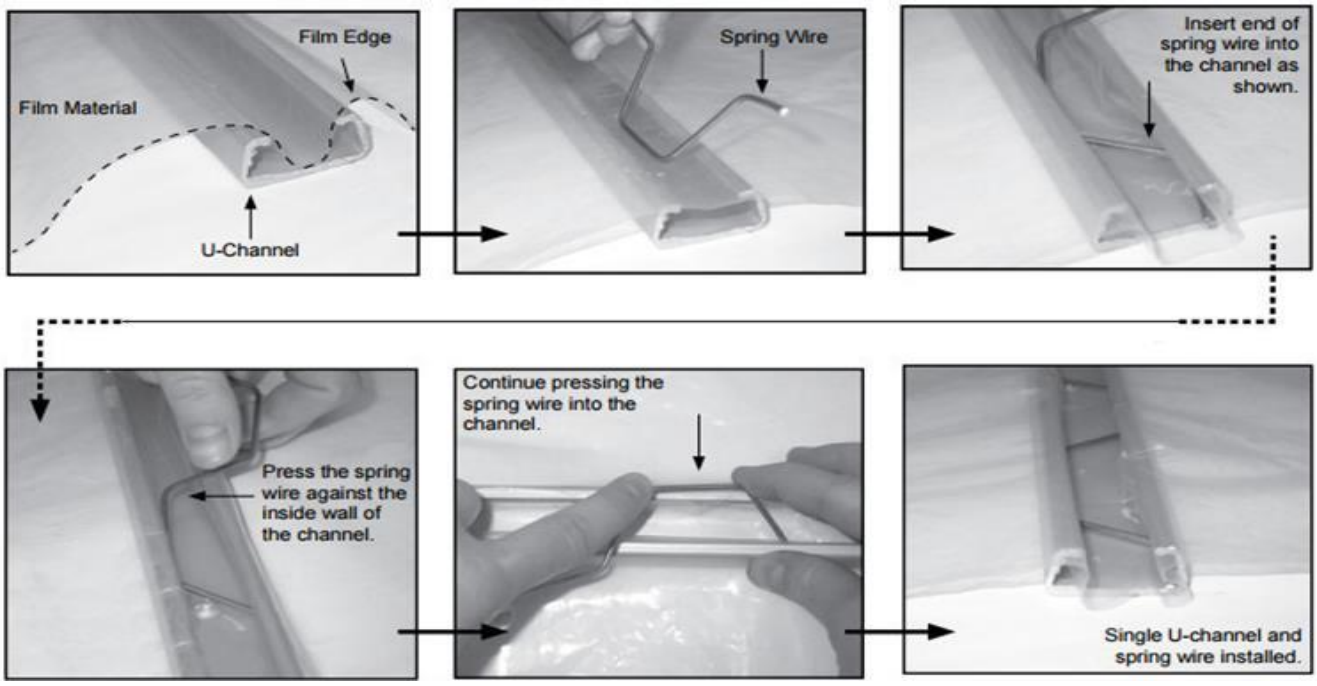

PIANO

**Inside Width:**31.5mm aluminum alloy channel
**Height:**1.2mm aluminum alloy channel
**Thicnkess:**1.2mm aluminum alloy channel
**Outside Width:**17.5mm aluminum alloy channel
**Length per PC:**2m/4m/6m aluminum alloy channel
**Feature:**

* Less transfer of heat to the plastic.
* Alloy section for high strength with light weight -: 130gsm / rmts ( Approximately)
* Working with 2-3 zig zag wires
* Designed with smooth edges to avoid any damage to plastics.
* Good performance on corrosion resistance
* Flat Bottom, Long Life
* Optional : 0.8mm 1.0mm 1.2mm 1.4mm in thickness

# Zig- Zag Wire

PIANO

Cover Material:plastic coated
Material:Special 72B wiggle wire
Length:2.2m wiggle wire
Weight:35.88g/m wiggle wire
Diameter:2mm/2.3mm wiggle wire
Specifical:2m/pc wiggle wire
Treatment:Full Coated wiggle wire

**Feature:**

Used to fix the film with profile for greenhouse covering.

UV stablized plastic coating

Special spring wire for enough strength to hold the poly film on greenhouse

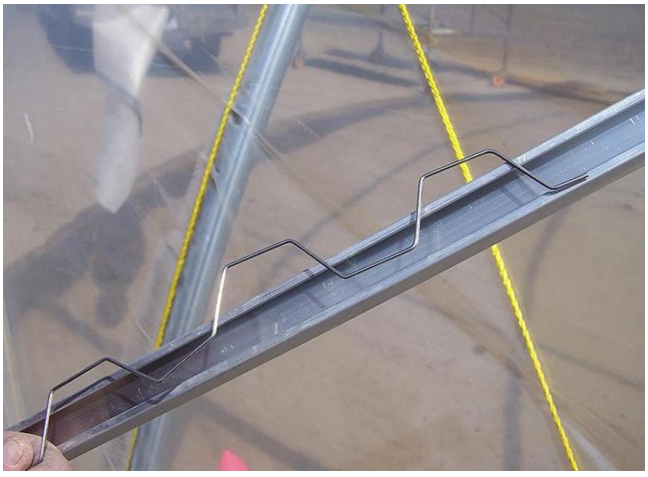

Best and most economic selection for film greenhousefastening system, with our Galvanized steel profiles or Aluminum profiles.

The spring wire can be used many times Without distortion.

Spring Wire is widely used in fastening the film in plastic greenhouse.It is more duralble and suitable for high temperature.

Hot-Galvanized

High-intensity dipping plastic coating Zig Zag wire

# Hand Operated Manual Winch Roll Film Greenhouse

PIANO

Manual hand film roller is simple to install,easy too operate and a cost-effective sidewall ventilation system.A roll up wall system will supply substantial control over the internal environment and may be adapted to most building designs.

Feature:Small size, light weight, simple installation, easy operation, safe and stable, wear-resistant and durable, low failure rate.

# Greenhouse Electric Roll Up Motor

Greenhouse Electric Roll Up Motorr replacing traditional manual roll-up unit to reach high speed automation in revolving & releasing films and greenhouse environment, it is the new generation of greenhouse ventilation and temperature regulation facilities. Portability, output torque, output lock, wide range and precise adjustment, waterproof, dew-proof and power-saving are the key characteristics for Electric Roll-Up Unit, which is the best choice for modern daylight greenhouse applied in different climates.

**Detail:**

Rated Power:100W greenhouse ventilation motor
Rated Torque:60N.m greenhouse ventilation motor
Rated Current:3.7A greenhouse ventilation motor
Voltage:DC24V +3V greenhouse ventilation motor
Rotate Speed:2.8r/min 3.3r/min greenhouse ventilation motor
Rolling Pipe Specs:3/4'' (OD27) or 1/2'' (OD33.5)
Rolling Capacity:75m(L)x4m(W) greenhouse ventilation motor

# Agricultural Protective Plastic Film PE Plastic

PIANO

**Color:**Translucent
**Thickness**:0.10/0.12/0.15/0.20mm
**Width:**8.5/9/10/11/12m
**Length:**20m/30m/ or other
**Transparency:**88%-91%
**Application:**Agriculture Planting
**Usage:**Agricultural Protective Plastic Film
**Features**:Waterproof,easy installed,economic

**Advantages:**

1.100% virgin raw material,the content of content metallocene is above is above 30%,high light transmission(≥90%),high Gloss,high rigidity.
2.The additive quality of Light Stabillizer is twice more than normal film,to keep the film longer duration.
3.Anti-Drip additives reduce surface tension of condensing water vapor and raise the surface tension of the inner side of plastic.
